CITY HALL.

MAYOR'S MESSAGE.

EXECUTIVE DEPARTMENT,
OFFICE OF THE MAYOR, CITY HALL,
FORT WAYNE, IND., January 1st, 1897. }

Gentlemen of the Common Council:

I have the pleasure of submitting to your honorable body the detailed reports of the heads of the different departments of the city government for the fiscal year of 1896. I invite your careful attention and study to each of them, and by so doing it will be unnecessary for me to review them at any length.

CITY CHARTER.

The city charter has been thoroughly tested for the last three years under democratic as well as republican rule, and it has proven itself to be the law needed to conduct the public business of a city like ours. I have called the city attorney's attention to a few changes that ought, in my judgment, be made in one or more of the charter's sections pertaining to street improvements, and I hope the present legislature will make them. Aside from this, the charter is working well for

the interest of all citizens, and should not be juggled with for political purposes.

DEPARTMENT OF FINANCE.

The report of the city comptroller submitted to you will show that although the revenues, on account of the stringency of times and the reduction of fifteen cents (.15) per hundred from the tax rate of the former administration, have not been as plentiful as in the preceding year, yet the city government has promptly met all of its obligations, and not only avoided a deficit, but has added more to its credit. During the year additional appropriations to the amount of \$10,457.35 were granted for different purposes, such as new streets, sewers, etc., and by wise and economical management, the city has not only been able to live within its income, but has today a cash balance on hand of \$90,575.44 against \$86,071.81 on January 1st, 1896. The bonded debt has been decreased \$8,000, and the sinking fund, which on January 1st, 1896, had but \$10,781.91 to its credit, shows today a balance of \$14,253.64. All debts contracted by any of the departments in the preceding year have been fully satisfied and not a single bill remains unpaid against the city on January 1st, 1897; this being true, each department can go to work with a full appropriation for the new year, and not be handicapped by any over-drafts. If we consider the damages done by heavy rains last fall to our sewer system and the extra improvements made, the money expended on parks and filling the west side gravel pit, I think the department of finance shows the most gratifying results.

DEPARTMENT OF PUBLIC WORKS.

The members of this board have been faithful servants to the public, as every one of them has given his entire time and

attention to the work undertaken, and the result has been that all classes of property owners who have come in contact with them are fully satisfied with their doings, and not a single complaint about work has come to my ears concerning them. All the work undertaken by the board has been done at the very lowest figures obtainable and in a substantial and careful manner, so that the improvements made will compare favorably in point of material and construction with the best of its kind in existence. No improvements were made except those petitioned for by the property owners.

PARKS.

Our parks have been well taken care of, and I sincerely hope that all of them will be completed within a very short time. I would suggest to the members of the board that for the accommodation of the citizens living in Nebraska, a foot bridge be built as soon as possible across St. Marys river to Swinney park, so that that section of the city may have easy access to the park and enjoy the advantages thereof.

Reservoir park should also have your immediate attention. As the water works trustees have agreed to lay the walks around the base of the reservoir, the city should complete the grading and sidewalks as soon as practicable.

The Soldiers' Monument, erected in the Ninth ward park by some of our public-spirited citizens, seems to be somewhat out of proportion to the base upon which it rests, and I would therefore recommend that a sufficient amount of money be taken from the monument fund to raise the base as designed by architects, and that the spot around this worthy monument be beautified as well as the surroundings will permit.

SEWERAGE.

I would also call the attention of the board to the importance of the relief of South Wayne by the construction of a public sewer. This problem is very difficult to solve, and I ask that special attention be given to it by all interested, and that plans and specifications be prepared in sufficient time for a thorough examination during this year so that the construction may be undertaken in 1898.

ELECTRIC LIGHTS.

The electric light system of this city is perfect and cannot be surpassed by that of any other city in the country. The distribution of light has been well made, and wherever it is necessary new lights should be placed.

GARBAGE SYSTEM.

Our garbage system has been tried only for a short time, and I must say with most satisfactory results. Some improvements might be made in the storage and collection of garbage, and I would recommend that if possible a uniform receptacle for garbage be adopted by the citizens, so that the garbage might be gathered more easily and the receptacle be clean at all times.

The perforated tin garbage can system, such as is in use in many cities could be adopted with only a trifle expense to each householder. This system would materially improve the sanitary condition of the city. Two more garbage wagons should be added from May until November, to take care of the heavy accumulations of garbage during the fruit and vegetable season. I would also, in conclusion, recommend that all the labor employed on streets and parks be employed for such hours as the law of the state demands, eight hours. This

will give additional employment to a good many worthy and needy men, and aid some of them to at least make a living during these hard times.

BOARD OF SAFETY.

The board of safety, I must say, has performed a difficult task under trying circumstances, in keeping not only intact. but in raising our police and fire departments to a standard equal to that of any city of the same size. The police department, as constituted now, is fully up to all requirements and emergencies, but I believe that with the growth of the city the force should be increased in proportion so as to give proper protection to all parts of the city. Under the vigilant care of the head of this department, very few crimes have been committed in this city during the last year, and the parties who did commit them were promptly arrested, tried and sentenced.

FIRE DEPARTMENT.

This important department of public safety has done gallant service, and I may congratulate our citizens upon the few and very light losses sustained from fire. This system is about as complete as it can be, but the same recommendations hold good here as in the police department. the service should be increased in proportion to the increase of population and territory. I would recommend that, as soon as our finances will permit, an engine house be built and equipped for that part of the city lying west of the St. Marys river, also one in South Wayne. The engine now in use in house No. 2 has been in service for about thirty years, and should be replaced by a new one.

CITY ELECTRICIAN.

A petition has been recently addressed to the city council asking for the appointment of a city electrician, whose duties

it will be to examine all public and private buildings for proper wiring. I do think this matter is important and should be investigated, as electricity is daily coming more and more in use, and will soon be a very potent factor in civilized life. The careful wiring of buildings will have a tendency to reduce the risk of fire from defective wires, and probable save thousands of dollars to the people, as well as the insurance companies. If you should find it expedient to employ such an electrician, I think it about time for the different fire insurance companies of this city to reduce the rates of insurance, and steps should be taken by all citizens alike to bring about this result. We have in the last fifteen years improved our fire and water works departments to a high standard, and still insurance rates have been continually increasing. I don't believe a city like Fort Wayne should be made to furnish the surplus revenue with which to pay heavy losses on cheap rated risks in larger cities.

DEPARTMENT OF HEALTH.

This department has done good work, careful and personal attention having been given to their respective duties. I can say that this city has shown less contagious diseases during last year than any time previous. The office of city bacteriologist has materially assisted every physician in the city in the diagnosis of diphtheria and other contagious diseases, and has been one of the main causes in reducing the death rate of our city. This department should be encouraged by all citizens in the performance of its duties, as any assistance rendered them will benefit every individual.

DEPARTMENT OF LAW.

There have been no judgments rendered against this city during the past year. The judgments and claims allowed

previous to 1896 have been compromised and paid, and I hope that during the next year every officer in the city government by carefully attending to his duties, will prevent any cause for damage suits or complaints.

WATER WORKS.

The annual report of this department, which will be submitted to you, shows that our water works system is nearly completed and operated upon a paying basis, and that the reductions made in rates to consumers will not materially interfere with the revenues. I am convinced, however, that the question of "Water Supply" is still a serious one, and should very soon be solved. I therefore direct the attention of the board of trustees, as well as the committee on water works, to this important fact, and would ask them to use every effort to finally and effectually determine upon the ways and means of obtaining a sufficient supply of pure and wholesome water for all purposes. If this is accomplished we can with pride point to our water works as the best owned by any city.

DEPARTMENT OF EDUCATION.

Our public schools speak for themselves. They need no commendation. They have been managed by a board of trustees who are thoroughly competent and who have placed at the head of our educational institutions a man as superintendent who is known to be as worthy and efficient as any one in the state. The standard of our schools has been steadily improved, and I hope that under the careful management of the present board they will continue to do so.

In conclusion I wish to extend to your honorable body, as well as all other officers of the city government, my best

thanks for the courtesy you have shown me, and the fidelity with which all have discharged their trust, and I hope to receive during the ensuing year your cordial support, so that when our term is ended we may merit the approbation of the people whose servants we are.

Very respectfully,

HENRY P. SCHERER,

Mayor.

Department of Law.

1896.

DEPARTMENT OF LAW.

FIRST ANNUAL REPORT

—OF—

WILLIAM H. SHAMBAUGH,

CITY ATTORNEY,

FOR THE

Fiscal Year Ending December 31st, 1896.

Report of City Attorney.

OFFICE OF THE CITY ATTORNEY, }
FORT WAYNE, IND., JANUARY 1, 1897. }

To the Mayor of the City of Fort Wayne, Indiana:

SIR—As provided by section 59 of the charter, I herewith submit to you for your consideration a report embracing in detail the business transacted in the department for the year ending December 31st, 1896. My connection with the business of the department for the year commenced May 11th, 1896, and ended December 31st, 1896. During that time four cases were brought against the city for damages; two of those were settled by contractors without any cost to the city, and the other two, viz., “Evans vs. the City” and “Russman vs. the City,” are still pending. Aside from that there were four cases brought against the Board of Public Safety by discharged firemen and policemen, wherein they are seeking to be reinstated in the services of the city, charging that they had been wrongfully discharged. The issues in one of the cases have been closed and argued and awaits the ruling of the court. The case of “the City of Fort Wayne vs. the Lake Shore railroad,” tried in the early part of the year, has by the

city been appealed to the Supreme Court. It has been briefed, and it is hoped that the court will dispose of it at an early date.

The court dockets, as relating to the city, show the following cases pending, some of recent date and others of long standing:

Russman <i>vs.</i> City, demand.....	\$5,000
Evans <i>vs.</i> City, demand.....	1,000
City of Fort Wayne <i>vs.</i> Doehrman, demand....	1,400
Seymour Smith <i>vs.</i> City, in Federal Court, demand	9,000
Volney Parks <i>vs.</i> City, Appeal from Street Opening Assessment.....	
Ross <i>vs.</i> City.....	

The case of "Smith *vs.* City" is the one in which plaintiff demands \$9,000 for crematory that by him was constructed and the city refused to take it for the reason that it was not according to contract.

It is not being pushed by plaintiff very vigorously, and I am led to believe that the city has a valid defense. The case of "Ross *vs.* the City" dates back to the year 1890. Plaintiff is seeking to recover damages for an infringement of a patent. The case since then has been in the hands of S. R. Alden, who at that time was employed as special counsel. Eventually it will have to be disposed of in some way.

Careful attention has been given by the boards in matters pertaining to their different departments, and fewer law suits have been the results. There has been no judgment rendered against the city during the year, and hence the department

has been to but a small expense. The expense of the department is set out in detail in Comptroller's report and it will be unnecessary for me to duplicate it here.

Very truly yours,

W. H. SHAMBAUGH,

City Attorney.

Department of Finance.

1896.

City of Fort Wayne, Indiana.

FIRST ANNUAL REPORT

—OF—

HENRY C. BERGHOFF,

CITY COMPTROLLER,

FOR THE

Fiscal Year Ending December 31st, 1896.

HENRY C. BERGHOFF, - - Comptroller.

JOHN G. NOLL, - - Deputy Comptroller.

Department of Finance.

OFFICE OF COMPTROLLER,
FORT WAYNE, Ind., Jan. 25, 1897. }

To His Honor the Mayor and Common Council:

GENTLEMEN—In accordance with the provisions of section 59, city charter, I hereby submit my annual report, together with the City Treasurer and Auditor's report of the receipts and expenditures of the city during the past year 1896, setting forth in detail all money expended by the different departments, the balances on hand and a general statement of all assets and liabilities of the city.

It is unnecessary for me to further explain any of the amounts, as they show for themselves. All I wish to say is that I am convinced that the strictest economy has been observed by the heads of all departments, and the result has been that with reduced revenues and large public improvements made, I show a net balance to the credit of the city of \$90,575.44 on January 1st, 1897, against \$86,071.81 on January 1st, 1896, and after paying \$8,000 on the bonded debt, a balance in the sinking fund of \$14,253.64 against \$10,781.91 on January 1st, 1896.

Respectfully submitted,

HENRY C. BERGHOFF,
Comptroller.

RECEIPTS.

Total amount of balances standing to the credit of all appropriation and special accounts on the 31st day of December, 1895, and brought forward to the year 1896, as shown on page 35 of the annual reports for the year 1895, itemized as follows:

OFFICE OF THE BOARD, }
FORT WAYNE, IND., January 1st, 1897. }

*To the Hon. Henry P. Scherer, Mayor of the City of Fort
Wayne, Indiana:*

SIR:—

We respectfully submit to you the Third Annual Report of the Department of Public Works of the city of Fort Wayne, Indiana, covering the fiscal year ending December 31st, 1896. The present Board, consisting of Peter Eggeman, P. H. Kane and J. K. McCracken, appointed by you on the 8th day of May, 1896, to succeed Thos. DeVilbiss, W. H. McClelland and Henry A. Reed, met on the 8th day of May, 1896, and organized by electing Peter Eggeman chairman. A portion of the work done by and under the supervision of the Board of Public Works during the past year was ordered and commenced under direction of our predecessors, while the larger portion of it was ordered and completed under the supervision of the present Board. During the past year a great deal has been done

to improve the condition of the city in many ways. A number of streets and alleys have been given a substantial and lasting vitrified block pavement, while others have been graded and improved otherwise, many new sidewalks have been built, others relaid and repaired, new local sewers constructed, more electric street lamps added where most necessary, additional improvements made in our parks, several public drinking fountains erected in various parts of the city, in short, everything in the nature of improvements needed and of a permanent and lasting benefit to the city has been done as far as time and means at our disposal would permit. It has constantly been our aim to serve the best interest of the tax-payers and the city at large, and we have done all in our power to carry out the wishes of the people in every respect as far as practicable. We are well aware of the fact that the position you have called us to is a laborious and onerous one, still we believe that the course we have pursued in all of our official acts will meet with your approval as well as with the endorsement of those of our citizens who have the best interest of the city at heart.

We attach hereto the reports of the City Civil Engineer, Superintendent of Streets, Superintendent of Parks, and Superintendent of Crematory, which give in detail the work done in their respective departments.

PLATS RECORDED.

Fourth street as opened April 20th, 1896.

Walton avenue as opened May 4th, 1896.

Organ avenue as opened May 4th, 1896.

Plat of Romary's addition, approved July 6th, 1896.

Plat of Lombard's Park addition as rearranged, November 13th, 1896.

Leith street as opened December 21st, 1896.

Brookside street as opened December 21st, 1896.

Alley north of Cochrane street from Coombs street to Canal street as opened December 21st, 1896.

Alley vacated between lots 100 and 101 and 102 White's 1st addition, December 21st, 1896.

Alley vacated between lots 377 and 378, Hanna's addition, December 21st, 1896.

Alley vacated between lots 295 and 296, 301 and 302, Hanna's addition, December 21st, 1896.

BUILDING PERMITS.

Although the year of 1896 was one of general business depression, the orders for building permits issued show a large increase in money invested in buildings over the year before.

Building permits were issued as follows:

January.....	12	permits, amounting to.....	\$ 6,010
February	12	“ “	12,750
March	30	“ “	38,990
April	42	“ “	42,655
May	34	“ “	25,655
June.....	45	“ “	47,370
July	32	“ “	56,200
August	17	“ “	23,250
September.....	22	“ “	14,250
October	31	“ “	13,625
November.....	9	“ “	3,100
December	13	“ “	443,700

Total.....299 permits, amounting to.....\$717,555

DISPOSAL OF GARBAGE.

Our present system of collecting and disposing of the city's garbage received its first practical test during the past year, and while it is without doubt a great improvement over the system in vogue prior to the adoption of the present one, it did not produce the results necessary to maintain a good sanitary condition throughout the city during the hot summer months. The fault does not lie with the Crematory or the system of incinerating the garbage, but has been due to the fact that not the proper wagons nor a sufficient number of them were on hand to properly collect the garbage. One year ago our predecessors bought four (4) Hill Patent Steel Body Dump Wagons, paying for them \$900 in cash, besides freight charges amounting to \$21. Why such a high-priced, heavy, unwieldy wagon should have been selected is hard to explain. Facts are, that while the carrying capacity of each wagon would permit the loading of at least three tons, the box does not afford the space to load more than about one ton. In short, they are constructed too heavy, too wide—the rear pair of wheels tracking at seven feet—thereby impeding their free passage through a great many of our alleys, especially so in unimpaired alleys during a wet summer like the past has been. The city was divided into four districts, and the collection of the garbage in each district for one year after the 12th of February, 1896, was let to the lowest bidder, who must furnish team, harness, keep the wagon in good repair, and personally collect the garbage in the district assigned to him.

District No. 1 includes all the territory north of Main street as far east as Lafayette, thence north to the Maumee river and all territory north of said river. Frank Draker, with wagon No. 1, was assigned to this district.

District No. 2 covers all the territory lying south of the Maumee river, east of Lafayette street as far south as the P., Ft. W. & C. Ry., thence east to Hanna street and all territory east of Hanna street south to the city limits. John A. Soliday, with wagon No. 2, was assigned to this district, and upon the resignation of Soliday on the 25th day of July, George Hassard was awarded the contract for the balance of the unexpired term.

District No. 3 comprises that territory lying between Main street and the P., Ft. W. & C. Ry. west of Lafayette street to the city limits. George W. Haskell, with wagon No. 3, was assigned to this district.

District No. 4 comprises all the territory south of the P., Ft. W. & C. Ry. and west of Hanna street. Jacob C. Hess, with wagon No. 4, was assigned to this territory.

It will be seen that the territory assigned to each wagon is so large that it is an impossibility for them to cover it as often as it necessarily should be, especially so during the summer months when the amount of garbage to be collected is much larger on account of the large amount of green vegetables used in every household. It was impossible for the collectors to get over their routes oftener than once a week, and in some instances it took longer, and we all know that during warm weather this is by far not often enough. The Board, therefore, decided to buy two additional garbage wagons of a type better adapted to the requirements of the collection of garbage than those now at hand, and to put them into service during the summer months, thereby increasing the force from four to six wagons. This will insure a more prompt and efficient collection, and in the opinion of the Board will meet all requirements for the present. Below you

will find a table showing the amount of garbage removed to the Crematory by the four (4) collectors employed by the city as well as by others not employed by the city.

Of the Crematory, now under supervision of A. A. Gocke, we can but speak of the highest terms, and Fort Wayne certainly owns one of the best institutions of this kind to be found. It has done its work remarkably well, and in point of repairs has cost the city almost nothing. All kinds of combustible garbage, dead animals, etc., have been totally incinerated without any trouble whatever. For fuel, natural gas has been used exclusively. Only two men are required at the Crematory and can attend to all the work that has to be done there, one of them being regularly employed during the day and the other at night. The day man has charge of the plant and is responsible for the proper keeping of everything about it. Besides burning garbage all day, he is required to note the actual time of arrival of every load of garbage at the plant and send it to the office of the Board daily, thereby enabling us to satisfy ourselves as to the amount of work done by each of the city's collectors during each day, as well as to the amount of material incinerated. The night man has to finish up the burning of all the material collected and not destroyed during the day, and after that clean grates and remove all ashes and get everything ready for the day man to commence burning early in the morning.

The total cost to the city for "Disposal of Garbage" during the past year has been \$7,206.98, divided as follows:

For collecting garbage.....	\$3,368 45
For salary of help at Crematory.....	1,019 84
For castings and grates (including the making of patterns)	185 05

For fuel.....	1,512 53
For salary of City Scavenger.....	144 00
Four new wagons and freight.....	921 00
Incidentals and repairs	56 11

Total.....\$7,206 98

Prior to February 12th, 1896, no records were kept of the amount of garbage collected and destroyed. Since then, however a complete record has been kept and is herewith submitted:

	BY CITY'S COLLECTOR.					BY OTHERS.				
	Wagon No. 1.	Wagon No. 2.	Wagon No. 3.	Wagon No. 4.	Days Worked.	Wagon Loads	Barrelsfull.	Horses, Cattle	Dogs & Cats.	Poultry.
Feb.....	16	17	21	14	7	16	138	1	7
March.....	53	55	59	46	26	48	586	13	4
April.....	57	57	51	47	26	50	383	2	29	1
May.....	63	62	67	58	25	37	669	1	20	2
June.....	74	71	78	60	26	37	876	1	23	3
July.....	68	59	71	48	24	49	889	26	10
August.....	75	64	77	67	26	68	831	1	21
Sept.....	75	66	73	65	25	52	703	11	2
Oct.....	67	60	61	53	27	59	557	2	25
Nov.....	50	48	49	46	24	51	437	10
Dec.....	52	52	52	53	26	45	680	1	8
Total.....	650	611	659	557	262	512	6749	9	193	22

Total number of tons incinerated.....3,685
 Total cost of collecting garbage.....\$2,847 62
 Average cost per ton.....77 $\frac{1}{3}$ cts
 Total cost for fuel.....\$1,426 68
 Average cost per ton for fuel.....38 $\frac{2}{3}$ cts
 Average cost per ton for collecting and destroying garbage.....\$1.50 $\frac{1}{2}$

Considering the fact that this was the first year that the system of disposing of garbage by complete incineration was in vogue in this city, it must be pronounced a complete success in every way, and profiting by past experience will be improved upon whenever an occasion is given to do so. From a sanitary standpoint it is the only system by which the chances of contagion are reduced to a minimum.

PUBLIC LIGHTS.

The city is lighted by a system of arc lamps operated under a contract with the Jenney Electric Light and Power Company, which expires on the 26th day of June, 1899. The price for each arc lamp per annum is \$120. On the first day January, 1896, there were in use 240 arc lamps, and during the year eleven more were placed in various parts of the city, making a total of 251 now in use. Besides these the Jenney Electric Light and Power Company maintain from May 1st to November 1st of each year five arc lamps free of cost to the city distributed among our various parks, as stipulated in the contract with them.

The city can pride itself upon the fact that it is one of the best lighted cities in the United States to-day.

All lights not burning in accordance with the schedule are reported by the night police together with the number of hours each light is out, and a deduction of 5½ cents per hour is made for each light not burning.

The following table shows the cost of lighting the city each month, together with deductions made for lights not burning:

Jan.,	\$ 2,400 00	deducted \$ 7 12	net cost for light	\$ 2,392 88
Feb.,	2,400 00	" 59 26	" " " "	2,340 74

March,	\$2,449 00	deducted	\$23 81	net cost for light	\$ 2,425 19
April,	2,460 00	"	51 06	" " " "	2,408 94
May,	2,460 00	"	55 66	" " " "	2,404 34
June,	2,460 00	"	60 34	" " " "	2,399 66

Dec.,	2,510 00	"	3 96	" " " "	2,506 04

Tot'l	\$29,507 05		\$326 66		\$29,180 39
-------	-------------	--	----------	--	-------------

CONTRACTS AND FRANCHISES.

On the 14th day of January, 1896, the Board of Public Works entered into a contract with the Home Telephone and Telegraph Company, whereby the latter were granted the right to erect and maintain in and upon the streets and alleys of the city a telephone and telegraph system. Said company agrees to erect no poles within the territory lying within the west property line of Harrison street and the east property line of Barr street and the south line of the right of way of the New York, Chicago & St. Louis Railway and the north line of the right of way of the Pittsburg, Fort Wayne & Chicago Railway, but will lay all its lines within said territory in underground conduits. The Board of Public Works has the right to designate the location of all poles and conduits in and along any street or alley and the manner and mode of their construction. One hundred or more wires along any street or alley must be cabled. Within the territory where wires are to be placed underground, one duct capable of containing

200 wires, and the upper cross arms on all poles erected, are to be constructed and paid for by said company for the use of the city's fire alarm and telephone system wires.

Said company agrees to furnish telephones within the corporate limits of the city at the following rates:

For private residences for not more than \$24 per year.

For business houses for not more than \$36 per year.

For residence and business telephone to one and the same person, \$48 per year.

Said company also agrees to furnish to the city free the following telephones:

One in each fire engine house now or hereafter to be constructed.

One at each water works pumping station now or hereafter to be constructed.

One at the water works pumping station.

One in the office of the Water Works Trustees.

One in the office of the Board of Public Works.

One in the police station.

One in the Mayor's office.

One in the residence of the Superintendent of Police.

One in the residence of the Chief of Fire Department.

One in the office of the City Sanitarian.

One at the City Crematory.

One at the City Scales.

Said company further agrees to pay to the City of Fort Wayne after the first day of January, 1910, two (2) per cent. of its entire gross receipts, and that in fifty years from the date of the passage of the ordinance ratifying this contract, all rights, privileges, and permissions granted to or vested in said company, their associates, successors or assigns, shall

cease and revert to and become the property of the City of Fort Wayne.

PETITION OF ALEXANDER B. WHITE, ASKING FOR A STREET RAILWAY FRANCHISE.

On the 15th day of May, 1896, Alexander B. White appeared before the Board of Public Works, asking them to grant to him the right of way over certain streets of the city for the purpose of operating a line of street railway between the City of Fort Wayne and the town of New Haven. The board, recognizing the fact that such a line would be of great value to the city in a great many ways, subsequently held several meetings for the purpose of mapping out a route that would be equally acceptable to both the property owners along the right of way as well as the promoters of the railway company, and although several routes were gone over, no definite action has been taken so far.

PARKS.

A great deal in the way of improving and beautifying our parks was done during the past season, a detailed statement of which will be found in the annual report made by Mr. August Goers, Superintendent of Parks. With an appropriation of only \$9,106.78 for the improvement and maintenance of our entire park system, covering an area of ninety-three and three-quarter acres distributed throughout the various parts of the city, the board found that it could not carry out as many improvements during the past year as it wished to do. All of the greenhouses were thoroughly repaired, an additional boiler with the necessary piping added to the hot water heating system of our greenhouses, thousands of plants

and flowers were planted in the various parks last spring and cared for during the summer, all walks and driveways in all of the parks were graveled and rolled, in short, all of the parks were kept in a first-class condition. In Swinney Park, the largest of all our parks and destined to become the most beautiful of them, a great many improvements were made in accordance with the plans prepared by J. H. Lindrooth, of Chicago, and adopted by a former board in 1894. Additional walks and driveways were graded and graveled, additional drainage constructed, two first-class lawn tennis courts were built, a great deal of sodding was done and a large number of young trees and shrubs were planted. Thousands of our citizens show their appreciation of the improvements already made in this, the youngest of all our parks, by visiting it during the summer months. A bridge should be built across the St. Marys river at the north end of the park, in order to make it accessible to the large number of our citizens living in that part of our city commonly called "Nebraska."

A great deal of new work was completed in Reservoir Park. Nearly 100,000 square feet of sodding was done, a number of trees were planted, among them ten large sugar maple trees that were removed from the Court House square and planted on the island. Permanent improvements have also been made in Hayden, McCulloch, Old Fort and North Side Parks, additional trees having been planted last fall. The annual report of Mr. August Goers, Superintendent of Parks, is herewith attached for further information.

STREET DEPARTMENT.

This is one of the most important branches of work coming under the supervision of the Board of Public Works,

including as it does the repairing and cleaning of streets, the repairing, cleaning and flushing of sewers, catch-basins, and bridge repairs. Frank A. Weber, Superintendent of Streets, has immediate charge of all work coming under this department. The past season having been an exceptionally wet one, it caused a great amount of extra expense both for labor and material. All street repairs as well as all cleaning of streets was done under the direction of the Superintendent of Streets, the Board being able to obtain much better results by performing the work with its own employes than by contract. Our asphalt pavements were cleaned by hand, while our block and brick pavements were cleaned by machine. Owing to the large addition made to the mileage of our paved streets, we are compelled to purchase another street sweeper, thus enabling us to clean all paved streets promptly.

BRIDGES.

Our bridges are in very good condition, no repairs having become necessary during the past year. During the coming year, however, it will be necessary to give the wells street bridge a new floor.

SEWERS.

A great amount of repair work had to be done in this department caused by the exceedingly heavy rain falls during the past summer. The bulk-head of Hanna street sewer had to be rebuilt at an expense of \$583.92, the sewer in the alley between Wayne and Washington and Calhoun and Harrison streets relaid at an expense of \$217.07; also the sewer in the alley between Maumee road and Oak street from Division street to Chute street at a cost of \$368.89.

A crew of three men and one team were assigned to the work of cleaning catch-basins, and the report of the Superintendent of Streets shows that 989 catch-basins were cleaned at an expense of \$701.07, or about 71 cents for each catch-basin. For further details we refer you to the report of the Superintendent of Streets, which is hereto attached.

THE OPENING AND VACATION OF STREETS AND ALLEYS.

During the year it became necessary to open a number of streets and alleys by declaratory proceedings in order to give some property owners a proper street and alley outlet. In all instances these cases pertained to localities lying in the outskirts of the city and were in the main due to imperfect platting of additions to the city in past years, as far as providing for the necessary streets and alleys or the required width of same was concerned. All condemnation proceedings were always given careful consideration before they were instituted with a view of determining the necessity for such proceedings and the benefits derived therefrom, and to avoid any damages whatever to property interest if possible.

No streets were vacated and all alleys or parts of alleys vacated were in such localities where there were alleys running both north and south and east and west, and either one or the other was superfluous. In every instance petitions signed by a majority of property-holders interested in any of these proceedings were presented to the Board before any action was taken in the matter.

The following Declaratory Resolutions were adopted by the Board during the past year :

DECLARATORY RESOLUTION No. 19.—For the opening of

Walton avenue to a width of fifty-four feet from the north line of Walton avenue to the south line of the Maumee river ; also from the south line of Washington street to the north line of Maumee road.

Adopted on the 7th day of February, 1896.

Confirmed the 21st day of February, 1896.

DECLARATORY RESOLUTION No. 20.—For the opening and extending of Organ avenue from Indiana avenue to Beaver avenue to a width of fifty feet.

Adopted February 17th, 1896.

Confirmed on the 6th day of March, 1896.

DECLARATORY RESOLUTION No. 21.—For the opening and extending the alley between Scott Avenue and the south line of lots Nos. 1 and 7, Ewing's outlots, and the Wabash Railway, to a width of twelve feet.

Adopted on the 17th of February, 1896.

On account of remonstrances this resolution was rescinded on the 6th day of March, 1896.

DECLARATORY RESOLUTION No. 22.—Vacating the alley between lots 57 and 58 in the continuation of Hamilton's second addition.

Adopted on the 30th day of March, 1896.

Confirmed on the 17th day of April, 1896.

DECLARATORY RESOLUTION No. 23.—Condemning right of way for sewer purposes across the north side of lots No. 99 to 111, inclusive, Eliza Hanna, Sr.'s addition; also across the west side of said lot 111.

Adopted on April 20th, 1896.

On account of special agreement entered into between Eliza Hanna Hayden and her husband, Frederick J. Hayden,

owners of said lots, and owners of surrounding lots interested in said sewer, the aforesaid resolution was rescinded on the 26th day of June, 1896.

DECLATORY RESOLUTION No. 24.—For the opening of Brookside street from Leland street to Taylor street to a width of forty-five feet.

Adopted June 12th, 1896.

Confirmed on the 26th day of June, 1896.

DECLARATORY RESOLUTION No. 25.—For the opening of an alley north of Cochrane street from Coombs street to Canal street. Said alley to have a width of twelve feet.

Adopted July 6, 1896.

Confirmed July 17th, 1896.

DECLARATORY RESOLUTION No. 26.—For vacating the alley between lots 100 and 101 and 102, White's first addition, from Glasgow Avenue to the first alley west.

Adopted July 6th, 1896.

Confirmed July 17th, 1896.

DECLATORY RESOLUTION No. 27.—For vacating the alley between lots 377 and 378, Hanna's addition, from Erie street to the first alley south.

Adopted on the 20th day of July, 1896.

Confirmed the 31st day of July, 1896.

DECLATORY RESOLUTION No. 28.—For vacating the alley between lots 295 and 296 and 301 and 302, Hanna's addition, from Jefferson street to Madison street.

Adopted on the 20th day of July, 1896.

Confirmed on the 31st day of July, 1896.

STREET, ALLEY AND SIDEWALK IMPROVEMENTS.

A large number of substantial improvements of this class were made during the year 1896. By examining the report of the City Civil Engineer you will find that 1.83 miles of streets in various parts of the city were paved with vitrified paving block on a broken stone foundation; 560 feet of alleys in the center portion of the city were paved with the same class of material, and four and one-half miles of brick sidewalks were laid, chiefly in outlying districts. All improvements of this class were petitioned for by a majority of resident property owners interested in such improvements made; 1.17 miles of streets and alleys were only graded, all of them being in outlying districts. Some of the work that was completed during 1896 was contracted for and begun during 1895, while all the work of this class contracted for during 1896 was completed before December, 1896.

The following improvement resolutions were adopted during 1895 and the work not accepted until in 1896:

Improvement Resolution No. 38.—For the grading to a width of ten feet and paving with brick to a width of five feet of the sidewalks on the east side of Oakland street from Third street to the south line of Beck's sub-division of lot No. 9, Ewing's outlots.

Adopted on the 12th of August, 1895.

William H. Oetting, contractor.

Work accepted on the 8th day of May, 1896.

Improvement Resolution No. 40.—For the construction of sidewalks on the east side of Hoagland Avenue from Pontiac Street to Killea street by grading to a width of fourteen feet and paving with brick to a width of five feet.

Adopted on September 6th, 1895.

William H. Oetting, contractor.

Work accepted the 8th day of May, 1896.

Improvement Resolution No. 41.—For grading Hoagland avenue from Pontiac street to Killea street to a width of thirty-two feet.

Adopted the 6th day of September, 1895.

William H. Oetting & Co., contractors.

Work accepted on the 29th of May, 1896.

Improvement Resolution No. 42.—For the construction of sidewalks on the west side of Hoagland avenue from Pontiac street to the south line of Ninde's addition by grading to a width of fourteen feet and paving with brick to a width of five feet.

Adopted on the 6th day of September, 1895.

William H. Oetting & Co., contractors.

Work accepted on the 8th day of May, 1896.

Improvement Resolution No. 43.—For grading the alley between Calhoun and Harrison streets from Creighton avenue to Allen street.

Adopted on the 6th day of September, 1895.

W. H. Oetting & Co., contractors.

Work accepted May 8th, 1896.

The following improvement resolutions were adopted and the work completed and accepted during 1896:

STREET IMPROVEMENTS.

Improvement Resolution No. 46.—Paving Pontiac street from Calhoun street to Lafayette with vitrified paving block on a six inch broken stone foundation.

Adopted on the 6th of March, 1896.

C. E. Moellering & Co., contractors.

Work accepted July 24th, 1896.

Improvement Resolution No. 50.—Paving Montgomery street from Calhoun street to Hanna street with vitrified paving block on a six inch broken stone foundation.

Adopted March 20th, 1896.

C. E. Moellering & Co, contractors.

Work accepted October 2, 1896.

Improvement Resolution No. 52.—Grading Liberty street from Harmer street to Canal street to a width of twenty-four feet.

Adopted March 20th, 1896.

Julius Remus, contractor.

Work accepted September 4th, 1896.

Improvement Resolution No. 55.—Paving Wells street from St. Marys river bridge to a point 60 feet north of the L. S. & M. S. Ry. with genuine Trinidad Pitch Lake asphalt.

Adopted April 3, 1896.

On account of remonstrances rescinded May 22, 1896.

Improvement Resolution No. 56.—Paving Wells street from a point 60 feet north of the L. S. & M. S. Ry. to the north line of Huffman street with genuine Trinidad Pitch Lake asphalt.

Adopted April 3, 1896.

On account of remonstrances rescinded May 22, 1896.

Improvement Resolution No. 57.—Paving Wells street from the north line of Huffman street to Archer avenue with genuine Trinidad Pitch Lake asphalt.

Adopted April 3, 1896.

On account of remonstrances rescinded May 22, 1896.

Improvement Resolution No. 58.—Paving Allen street from Calhoun street to Clinton street with vitrified paving block on a six inch broken stone foundation.

Adopted May 1st, 1896.

Further proceedings postponed.

Improvement Resolution No. 59.—For paving Jefferson street from Broadway to the west line of Garden street with genuine Trinidad Pitch Lake asphalt.

Adopted the 15th day of May, 1896.

On account of remonstrances rescinded May 29th, 1896.

Improvement Resolution No. 60.—Paving Wells street from St. Marys river bridge to a point 60 feet north of the L. S. & M. S. Ry. with vitrified paving brick.

Adopted the 22d day of May, 1896.

T. B. Empie, contractor.

Work accepted November 20th, 1896.

Improvement Resolution No. 61.—Paving Wells street from a point 60 feet north of the L. S. & M. S. Ry. to the north line of Huffman street with vitrified paving brick.

Adopted May 22, 1896.

T. B. Empie, contractor.

Work accepted December 17, 1896.

Improvement Resolution No. 62.—Paving Wells street from the north line of Huffman street to Archer avenue with vitrified paving brick.

Adopted May 22, 1896.

T. B. Empie, contractor.

Work accepted October 23, 1896.

Improvement Resolution No. 64.—Grading Winch street to a width of twenty-six feet from Maumee road to the Wabash Railroad.

Adopted June 1st, 1896.

On account of remonstrances rescinded June 12th, 1896.

Improvement Resolution No. 65.—Paving Jefferson street from Broadway to the west property line of Garden street with vitrified paving block.

Adopted June 5th, 1896.

On account of injunction proceedings rescinded on the 13th day of July, 1896.

Improvement Resolution No. 66.—Grading Winch street to a width of twenty-six feet from Maumee road to the Wayne Trace.

Adopted June 12th, 1896.

W. H. Oetting, contractor.

Work accepted October 30th, 1896.

Improvement Resolution No. 72.—Paving Jefferson street from Broadway to the west property line of Garden street with vitrified paving block on a six inch broken stone foundation.

Adopted July 18th, 1896.

C. E. Moellering & Co , contractors.

Work accepted December 3, 1896.

Improvement Resolution No. 73.—Grading Leith street to a width of twentieth-six feet from Calhoun street to Hoagland avenue.

Adopted August 7th, 1896.

George Wilhelm, contractor.

Work accepted Nov. 16th, 1896.

Improvement Resolution No. 80.—For grading Force street to a width of thirty feet from Ninth street to Tenth street.

Adopted August 21st, 1896.

John Draker, contractor.

Work accepted December 3, 1896.

ALLEY IMPROVEMENTS.

Improvement Resolution No. 68.—Paving with vitrified paving block on a six inch broken stone foundation the alley between Berry and Wayne streets from Clinton street to a point 182½ feet east of Clinton street.

Adopted June 12th, 1896.

C. E. Moellering & Co., contractors.

Work accepted October 2nd, 1896.

Improvement Resolution No. 69.—Paving with vitrified paving block on a six inch broken stone foundation the alley between Main and Columbia streets from Calhoun street to Clinton street.

Adopted June 29th, 1896.

Julius Remus, contractor.

Work accepted October 20th, 1896.

Improvement Resolution No. 85.—Grading to a width of fourteen feet the alley between Oak street and Summit street from Chute street to Ohio street.

Adopted August 31st, 1896..

John Draker, contractor.

Work accepted November 13th, 1896.

Improvement Resolution No. 86.—Grading the alley between Dawson and Williams streets from Webster street to Hoagland avenue to a width of fourteen feet.

Adopted August 31st, 1896.

Further proceedings postponed until May 7th, 1897.

SIDEWALK IMPROVEMENTS.

Improvement Resolution No. 47.—For the construction of sidewalks on the west side of Tecumseh street from Columbia avenue to Elmwood avenue by grading to a width of ten feet and paving with brick to a width of five feet.

Adopted March 6th, 1896.

Contractor, Hiram Porter.

Work accepted June 12th, 1896.

Improvement Resolution No. 48.—For the construction of sidewalks on the west side of Jane street from Leith street to Grace street; also on the east side of Jane street from the first alley north of Grace street to Grace street, by grading to a width of ten feet and paving with brick to a width of four feet.

Adopted March 6th, 1896.

Contractor, Henry A. Gerberding.

Work accepted June 5th, 1896.

Improvement Resolution No. 49.—Constructing sidewalks on the east side of Calhoun street from the south line of lot 30, Fleming & Esmond's addition, to Grace street; also on the north side of Grace street from Calhoun street to Lafayette street, and on the west side of Lafayette street from the first alley north of Grace street to Grace street, by grading to a width of ten feet and paving with brick to a width of five feet.

Adopted March 6th, 1896.

Contractor, William Horstman.

Work accepted June 12th, 1896.

Improvement Resolution No. 51.—Constructing sidewalks on the east side of Smith street from Creighton avenue to Pontiac street by grading to a width of ten feet and paving with brick to a width of five feet.

Adopted March 20th, 1896.

Contractor, George Wilhelm.

Work accepted July 3, 1896.

Improvement Resolution No. 53.—Constructing sidewalks on the south side of Liberty street from Begue street to Canal street, and on the north side of Liberty street from Coombs street to Canal street, by grading to a width of thirteen feet and paving with brick to a width of four feet.

Adopted March 20th, 1896.

Contractor, Henry A. Gerberding.

Work accepted July 3, 1896.

Improvement Resolution No. 54.—Constructing sidewalks on both sides of Liberty street from Harmer street to Begue street by grading to a width of eight feet and paving with brick to a width of four feet.

Adopted March 20th, 1896.

Contractor, George Wilhelm.

Work accepted August 21st, 1896.

Improvement Resolution No. 63.—Constructing sidewalks on the north side of Erie street from Harmer street to Francis street.

Adopted June 1st, 1896.

Contractor, William Horstman.

Work accepted August 21st, 1896.

Improvement Resolution No. 67.—Constructing sidewalks on the east side of Holten avenue from Creighton avenue to Greene street by grading to a width of ten feet and paving with brick to a width of five feet.

Adopted June 12th, 1896.

Contractor, W. H. Oetting.

Work accepted October 9th, 1896.

Improvement Resolution No. 70.—Constructing sidewalks on the south side of Belle avenue from Shawnee avenue to the first alley west of Shawnee avenue by grading to a width of eight feet and paving with brick to a width of four feet.

Adopted June 29th, 1896.

Contractor, Julius Remus.

Work accepted September 4th, 1896.

Improvement Resolution No. 71.—Constructing sidewalks on the east side of Sherman street from Huffman street to Putnam street by grading to a width of ten feet and paving with brick to a width of four feet.

Adopted June 29th, 1896.

Contractor, George Wilhelm.

Work accepted October 9th, 1896.

Improvement Resolution No. 73.—Constructing sidewalks on both sides of Leith street from Calhoun street to Hoagland avenue by grading to a width of twelve feet and paving with brick to a width of five feet.

Adopted August 7th, 1896.

Contractor, George Wilhelm.

Work accepted November 16th, 1896.

Improvement Resolution No. 74.—Constructing sidewalks on both sides of Jones street from Rockhill street to the first alley west of Rockhill street by grading to a width of eight feet and paving with brick to a width of four feet.

Adopted August 7th, 1896.

Contractor, Henry A. Gerberding.

Work accepted October 30th, 1896.

Improvement Resolution No. 75.—Constructing sidewalks on both sides of Swinney avenue from Nelson street to Garden street by grading to a width of twelve feet and paving with brick to a width of four feet.

Adopted August 7th, 1896.

Contractor, Henry A. Gerberding.

Work accepted October 23, 1896.

Improvement Resolution No. 76.—Constructing sidewalks on both sides of Stophlet street from Nelson street to Garden street by grading to a width of ten feet and paving with brick to a width of four feet.

Adopted August 7th, 1896.

Contractor, Julius Remus.

Work accepted August 2, 1896.

Improvement Resolution No. 77.—Constructing sidewalks on the east side of Metz street from the north line of lot No. 2 Old Orchard addition to Guthrie street, by grading to a width of ten feet and paving with brick to a width of four feet.

Adopted August 7th, 1896.

Contractor, Julius Remus.

Work accepted October 23, 1896.

Improvement Resolution No. 78.—Constructing sidewalks on the south side of Fifth street from Wells street to the west line of lot No. 7, Ganzer's addition, and on the north side of Fifth street from Wells street to the west line of lot No. 8 Beck's addition, by grading to a width of six feet and paving with brick to a width of three feet.

Adopted August 21st, 1896.

Contractor, John Draker.

Work accepted October 30, 1896.

Improvement Resolution No. 79.—Constructing sidewalks on the west side of Alliger street from Maumee road to Hugh street by grading to a width of eleven feet and paving with brick to a width of four feet.

Adopted August 21st, 1896.

Contractor, Gustave Horstman.

Work accepted October 23, 1896.

Improvement Resolution No. 80.—Constructing sidewalks on both sides of Force street from Ninth street to Tenth street by grading to a width of fifteen feet and paving with brick to a width of five feet.

Adopted August 21st, 1896.

Contractor, John Draker.

Work accepted December 3, 1896.

Improvement Resolution No. 81.—Constructing sidewalks on the east side of Shawnee avenue from the north line of lot No. 46, Zollars & Swayne's addition to Home avenue, and on the east side of Shawnee avenue from Grace avenue to Home avenue by grading to a width of ten feet and paving with brick to a width of four feet.

Adopted August 21st, 1896.

Contractor, Julius Remus.

Work accepted December 3, 1896.

Improvement Resolution No. 82.—Constructing sidewalks on the north side of Purman street from Warsaw street to the first alley east of Warsaw street by grading to a width of eight feet and paving with brick to a width of four feet.

Adopted August 28th, 1896.

Contractor, George Wilhelm.

Work accepted November 3, 1896.

Improvement Resolution No. 83.—Constructing sidewalks on the east side of Gay street from Pontiac street to Tenth street by grading to a width of twelve feet and paving with brick to a width of five feet.

Adopted August 28th, 1896.

Contractor, W. H. Oetting.

Work accepted November 13th, 1896.

Improvement Resolution No. 84.—Constructing sidewalks on both sides of Greene street from Smith street to Thomas street by grading to a width of ten feet and paving with brick to a width of four feet.

Adopted August 28th, 1896.

Contractor, George Wilhelm.

Work accepted December 3, 1896.

Improvement Resolution No. 87.—Constructing sidewalks on the east side of Walton avenue from Maumee road to the Wayne Trace by grading to a width of eight feet and paving with brick to a width of four feet.

Adopted September 14th, 1896.

Contractor, Gustave Horstman.

Work accepted November 20, 1896.

Improvement Resolution No. 88.—Constructing sidewalks on the south side of Greene street from lot No. 43, Greene's subdivision to Holten avenue by grading to a width of ten feet and paving with brick to a width of four feet.

Adopted October 5th, 1896.

Contractor, George Wilhelm.

Work accepted Dec. 3, 1896.

Improvement Resolution No. 89.—Constructing sidewalks on the west side of Force street from Pontiac street to Ninth street by grading to a width of fifteen feet and paving with brick to a width of five feet.

Adopted November 9th, 1896.

Contractor, Frank Alderman.

Work accepted December 31st, 1896.

SEWERS.

MAIN SEWERS.

Main Sewer Resolution No. 1.—For the construction of a main sewer in the first alley north of Main street from St. Mary's river west to the first alley west of Runion avenue and on Cleveland avenue from the first alley north of Main street to a point 360 feet north of the first alley north of Main street. Said sewer to be a vitrified clap pipe sewer.

Adopted May 27th, 1895.

Julius Remus, Contractor.

Work accepted January 25, 1896.

No main sewer improvement resolutions were adopted during the year 1896.

The following local sewer improvement resolutions were adopted during the year 1895 and the work not accepted until in the year 1896.

Local Sewer Improvement Resolution No. 25.—For the construction of a system of local sewers in and along Broadway, Brackenridge street and other streets and alleys located in the southern part of the Fifth Ward.

Adopted September 9, 1895.

W. H. Oetting & Co., Contractors.

Work accepted April 24th, 1896.

Local Sewer Improvement Resolution No. 28.—For the construction of a 24-inch vitrified clay pipe sewer, commencing at the brick sewer on High street at the first alley west of St. Mary's avenue, thence north in said alley to the north line of Dryer & Williams' addition; also a 28-inch vitrified clay pipe sewer, commencing at the north line of Dryer & Williams' addition in the first alley west of St. Mary's avenue, thence north in said alley to the north line of Spring street; also an 18-inch vitrified clay pipe sewer in the alley between St. Mary's avenue and Franklin avenue from the north line of Spring street to the north line of Putnam street; also an 18-inch vitrified clay pipe sewer in the alley between St. Mary's avenue and Franklin avenue, commencing at the north line of Putnam street to Archer avenue.

Adopted October 8th, 1895.

Contractor, Julius Remus.

Work accepted October 2, 1896.

Local Sewer Improvement Resolution No. 29.—For the construction of a 12-inch vitrified clay pipe sewer in the first alley east of Fairfield avenue from the first alley north of Williams street to Williams street.

Adopted October 28th, 1895.

Contractor, Julius Remus.

Work accepted January 31st. 1896.

The following Local Sewer Improvement Resolutions were adopted during 1896:

Local Sewer Improvement Resolution No. 30.—For the construction of a 12-inch vitrified clay pipe sewer in and along Emily street and the alley between Fisher and Maud streets from the first alley west of Thomas street to Holten avenue.

Adopted March 6, 1896.

Contractor, Eugene VanMeter.

Work accepted July 3, 1896.

Local Sewer Improvement Resolution No. 31.—For the construction of a 12-inch vitrified clay pipe sewer in and along the alley between Lillie street and Walton avenue from the north property line of Milan street to the south line of lot No. 39, Lillie's outlots.

Adopted June 1st, 1896.

Contractor, W. H. Oetting.

Work accepted October 9th, 1896.

Local Sewer Improvement Resolution No. 32.—For the construction of a 12-inch vitrified clay pipe sewer in and along the alley between Calhoun and Harrison streets from the brick sewer in Baker street to the south line of the north half of lot No. 6, Baker's addition.

Adopted June 6th, 1896.

Contractor, W. H. Oetting.

Work accepted October 2, 1896.

Local Sewer Improvement Resolution No. 33.—For the construction of a 15-inch vitrified clay pipe sewer in the first alley south of Hayden street from the brick sewer in Winter street to the east line of Ohio street, and a 12-inch vitrified

clay pipe sewer in aforesaid alley from the east line of Ohio street to Gay street.

Adopted June 15th, 1896.

Contractors, C. E. Moellering & Co.

Work accepted Jan. 11, 1897.

Local Sewer Improvement Resolution No. 34.—For the construction of a 15-inch vitrified clay pipe sewer in the first alley north of Huffman street from the first alley west of Wells street to Short street, and a 12-inch vitrified clay pipe sewer in aforesaid alley from Short street to Hensch street; also a 12-inch vitrified clay pipe sewer in Short street and in the alley south of Putnam street from Short street to Hensch street.

Adopted August 21st, 1896.

Contractor. John Draker.

In course of construction December 31st, 1896.

Local Sewer Improvement Resolution No. 35.—For the construction of a 12-inch vitrified clay pipe sewer in and along the alley between Randall street and Maumee road from the brick sewer on Grant avenue to the first alley west of Grant avenue.

Adopted August 21st, 1896.

Contractor, Anton Rieg.

Work accepted Nov. 3, 1896.

CITY HALL.

Public Buildings and Grounds.

We herewith submit an inventory of such real estate owned by the city together with location of same and description of buildings thereon that come under the supervision of the Board of Public Works. All property owned by the city and not enumerated here is in charge of either the Board of Water Works Trustees or the Board of School Trustees.

CITY HALL.

This beautiful building is located on the southeast corner of Barr and Berry streets, having a frontage of 60 feet on Berry street and 150 feet on Barr street. The lot has a frontage of 76 feet on Berry street and is 150 feet deep.

The City Hall is a solid, entire stone structure designed in Romanesque architecture, and consists of basement, first and second story, with a large assembly hall in the third story.

The basement is occupied by the Police Force, with accommodations consisting of general police quarters, private offices, lavatories, store room, cell room, tramp room, together with room for the two horses and wagon of the Police Patrol. Aside from this there are the boiler room of the heating apparatus, two large vaults for preserving records, and the work-

shop and storage rooms of the Department of City Water Works.

On the first floor we find the offices occupied by the city officials, such as Comptroller, Board of Public Works, Department of Water Works, Superintendent of Police and the Police Court Room.

The second floor is occupied by the Council Chamber, Mayor's office, City Attorney, Board of Health, Board of Safety, City Clerk, City Civil Engineer and Associated Charities.

A large assembly hall used for public purposes covers the third story. The building was erected in 1893 at a cost of \$59,385.58 and furnished at an expense of \$10,420.88. The entire building is heated by steam and lighted by electric lights, artificial and natural gas. The lot upon which this building stands was originally donated to the city by the Honorable Samuel Hanna. In 1893 the city bought eighteen feet adjoining on the east, paying therefor \$2,250.00

ENGINE HOUSE No. 1.

This, our Central Fire Department Station, is located on East Main street, between Barr and Lafayette streets. The general dimensions of the building are 57 feet by 112 feet, and has been designed to meet all requirements of a house of this kind. On the ground floor are the steamer, hose wagon, 75 feet extension ladder truck, six stalls for horses immediately in the rear of the apparatus room with automatically opened doors to stalls. To the front and side of apparatus room is the telephone room and sitting room for the department men. Back of this is the room containing the chief's wagon and

horse, and in the rear of this is the wagon and horse of the electrician and line repairer.

Back of the horse stalls is the repair shop of the department. The second floor consists of the dormitory for the men, sitting room, library, chief's private office, room for the fire alarm instruments, bath room, hay loft, etc.

The building, a substantial brick structure with a liberal amount of cut stone trimmings, is heated with furnace and combination hot water system.

The lot upon which the building stands (lot 31, county addition, 70x150 feet) was bought by the city in 1892 for \$5,000. The engine house was erected in 1893 at a cost of \$12,000.

ENGINE HOUSE No. 2.

This house, located on Wallace street, between Lafayette and Clay, has a frontage of 50 feet and is 60 feet deep, and is a substantial brick building trimmed with cut stone. On the ground floor is apparatus room for steamer, hose wagon, hook and ladder truck, stalls for six horses, with an extra box stall

for sick horses, while the second floor is occupied with dormitory, reading room, bath room, hay loft, etc.

This house was built in 1885, costing \$3,000. In 1889 an addition to it was built costing \$2,000. The lot (No. 206 Lewis' addition, 50x150 feet) was bought in 1870 for \$1,050.

ENGINE HOUSE No. 3.

This house, located on Washington Boulevard, between Harrison and Webster streets, was built in 1893, costing \$5,300.

The lot (No. 465 Hanna's addition, 50x150 feet) was bought in 1892, costing \$4,500.

ENGINE HOUSE No. 4.

This house is located on Maumee road, between Ohio and Chute streets. It was built in 1893, costing \$5,220.

The lot (No. 85 Chute's homestead addition, 50x143 feet) was bought in 1891, costing \$1,200.

ENGINE HOUSE No. 5.

This house, located on Broadway, between Hendricks and Lavina streets, was built in 1893, costing \$5,183.

The lot (No. 32 G. W. Ewing's second addition, was bought in 1890 for \$1,650.

ENGINE HOUSE NO. 6.

This house, located on the northwest corner of Wells and Third streets, was built in 1893, costing \$5,190. The lot (east 80 feet of lot 29, Farnan's addition, $43\frac{1}{2} \times 80$, was bought in 1890, costing \$1,450.

Houses 3, 4 and 6 are of the same design, having a frontage of 37 feet and a depth of 67 feet.

House No. 5 is of a similar design, having a frontage of 34 feet and a depth of 77 feet.

All of these buildings are substantial, being constructed of brick and trimmed with cut stone. Their interior arrangements provide for room for steamer and hose wagon, sitting

room, stalls for four horses on first floor, while the second floor provides for dormitory for the men, captain's office, bath room, hay loft, etc.

The buildings are all in a first-class condition. We found that the iron roofs were badly in need of a good coat of paint, which was given them, this being the extent of repairs made.

PARKS.

North Side Park, containing parts of lot 1, Wells' reserve, area one acre, and all of North Side Park addition except lots 6, 7, 8, 14, 67, 83, 102, 103, 111 and 112, area 30.2 acres; total, 31.2 acres.

Swinney Park, covering 45.25 acres.

McCulloch Park, part of the south one-half of the north-west one-quarter of section 11, township 30, range 12, area 4 acres.

Hayden Park, 1.12 acres.

Old Fort Park, Taber's addition, lot 40, 0.18 acres.

GRAVEL PITS.

Ninde's first addition, lots 1 to 13, bought in 1869 for \$7,000.

Jones' plat, lots 11 and 12, bought in 1884 for \$850, and Jones' plat, lot 13, bought in 1887 for \$1,000, area 2 acres.

East End gravel pit, five acres in south one-half section 6, township 30, range 13, east, bought in 1873, \$15,000.

A triangular piece of ground near West Main street bridge, having a frontage of 51 feet on Rockhill street and 85 feet on Main street.

All of lot No. 6, in block 1, Ewing's addition lying east of Wells street, bought September 27th, 1894, \$1.00.

Lot 19, Zollars & Swayne's addition, was bought in 1892 by the town of South Wayne for a fire engine house site, before it was annexed to the city of Fort Wayne. The price paid for it was \$60.

PUBLIC MARKET.

The public market is located on the east side of Barr street just south of the city hall property, and covers a strip of ground 58 feet wide by 464 feet long, exclusive of Wayne street intersection. The ground was donated to the city by the Honorable Samuel Hanna for market purposes. We would recommend that a neat and substantial cover of some kind be erected over a part of the market space in order to protect patrons against bad weather. This would also insure to the city a higher annual rental for market stands, thereby paying for itself in a few years.

CITY SCALES.

The city scales are located on North Calhoun street near the county jail, and were put in at an expense of about \$500.

CREMATORY.

This building, located on North Clinton street just north of the St. Marys river bridge, is a substantial brick structure 50x50 feet, two stories high, covered with slate roof. The ground floor is occupied by the furnace and storage places for coal, fertilizer, tools and supplies. On the second floor we find the office of the Superintendent, the three fur-

nace openings and driveway for garbage wagons, enabling them to dump their loads into the furnace openings.

The crematory is a Dixon Garbage crematory, guaranteed to incinerate all kinds of garbage, including night soil and dead animals, without producing any offensive odors or causing any nuisance of any kind, and to be capable of consuming twenty tons or more of garbage of all kinds in ten hours, requiring not over one and one-half tons of slack or lump coal in the consumption thereof. The plant was erected in 1895 at a cost of \$8,000, and has been giving perfect satisfaction ever since, doing all that was claimed for it to perfection. For further particulars we respectfully refer you to our report on disposal of garbage.

REPORT OF
CITY CIVIL ENGINEER,
1896.

Report of City Civil Engineer.

ENGINEERING DEPARTMENT, }
FORT WAYNE, IND., January 1st, 1897. }

To the Ponorable Board of Public Works:

GENTLEMEN—The City Civil Engineer, complying with the annual custom, respectfully presents to your honorable body the report of the workings of the Engineering Department for the year 1896, the same being the third annual report under the new city charter.

STATEMENT OF SALARIES AND EXPENDITURES.

Salary of City Civil Engineer.....	\$1,400 00
Salary of Assistant.....	1,020 00
New lot books.....	240 00
Miscellaneous Expenses	90 64
<hr/>	
Total	\$2,750 64

PLANS AND SPECIFICATIONS.

The following plans and specifications have been prepared:

Street Paving	12
Street Grading	5
Alley Paving.....	2

Alley Grading.....	2
Brick Sidewalks	25
Sewers.....	6
Street Openings.....	3
Alley Openings.....	3
Alley Vacations.....	5
	—
Total	63

The tabulated statements contain the kind, length, size and cost of the various improvements made during the year.

UNDERGROUND CONDUITS.

Under the franchise granted the Home Telephone Company, January 14th, 1896, all territory lying between Harrison street on the west, the N. Y., C. & St. L. R. R. on the north, Barr street on the east, and the P., Ft. W. & C. R. R. on the south, the company were compelled to place the wires under ground, and one duct in every conduit is to be reserved by them for the use of the city's police patrol and fire alarm wires.

Under this franchise 1.94 miles of conduit were constructed, embracing 9.5 miles of duct, and were laid in the following streets and alleys:

Court street from Main street to Berry street.

Calhoun street from Superior street to alley south of Grand street.

Clinton street from the alley between Columbia and Main streets to the alley between Wayne and Washington streets.

Main street from Court street to Maiden Lane.

Berry street from Calhoun street to Court street.

Lewis street from Calhoun street to first alley west.

Harmony Court from Main street to first alley south.

Alley between Columbia and Main streets from Calhoun street to a point 94 feet east.

Alley between Columbia and Main streets from Clinton street to Barr street.

Alley between Berry and Wayne streets from Calhoun street to Harrison street.

Alley between Berry and Wayne streets from Calhoun street to a point 217 feet east.

Alley between Wayne and Washington streets from Clinton street to Barr street.

Alley between Wayne and Washington streets from Calhoun street to a point 164 feet east.

Alley between Wayne and Washington streets from Calhoun street to Harrison street.

Alley between Washington and Jefferson streets from Calhoun street to first alley west.

Alley between Grand and Highland streets from Calhoun street to first alley west.

Alley between Calhoun and Harrison streets from Main street to first alley north.

CONTRACTS.

The contracts completed the past year number fifty-two (52), and their character is as follows: Street paving six (6), alley paving two (2), street grading five (5), alley grading two (2), brick sidewalks twenty-eight (28), and sewers nine (9); of the above contracts nine were carried over from last year.

The aggregate amount expended for improvements under

the charge of this department is sixty-eight thousand four hundred and twenty-two dollars and twenty-seven cents (\$68,422.27). This amount exceeds the expenditures of last year nineteen thousand five hundred and ten dollars and ninety-nine cents (\$19,510.99) and is due to an increase in street paving.

STREET PAVING.

The length of streets paved the past season is 9,676 lineal feet or 1.83 miles, the cost of which was \$48,331.92; the material used was vitrified shale block, and 29,929 is the number of square yards necessary for these improvements.

This pavement was laid upon a foundation of broken stone six (6) inches deep with a cushion coat of two (2) inches of sand.

Wells street being the main thoroughfare for a large territory lying north of the river, its paving is probably the most important done during the year.

The improved streets in the city have a length of 21.57 miles, and their different kinds are as follows :

Kind of Pavement.	Miles.	Sq. Yards.
Trinidad asphalt	2.65	55,779
Shale and fire clay brick and block.....	6.43	118,717
Cedar block.....	11.53	236,800
Macadam	0.74	12,523
Cobble stone,.....	0.22	3,658
<hr/>		<hr/>
Total.....	21.57	427,477

ALLEYS PAVED.

Contracts for paving two (2) alleys with vitrified shale block were let, the length of which were 560 feet, the num-

ber of square yards being 870, costing \$1,272.15; 2.10 miles is the length of alleys paved as follows:

Kind of Pavement.	Miles.	Sq. Yds.
Vitrified brick and block.....	1.40	11,150
Cedar block.....	0.50	3,711
Cobble stone.....	0.20	1,036
	<hr/>	<hr/>
Total.....	2.10	15,897

STREETS GRADED.

During the past year five (5) streets or parts of streets were graded, necessitating the handling of 5,941 cubic yards of earth, and the length of the same being 6,183 feet or 1.17 miles, the cost of which was \$1,103.50.

ALLEYS GRADED.

The length of alleys graded was 1,292 feet, which was done under two contracts, costing \$146.03; 362 cubic yards of earth were handled for this work.

SIDEWALKS.

Four and one-half miles of sidewalks were paved with brick the past year. This amount exceeds the length laid the previous year by three and one-half miles; twenty-eight contracts were completed, costing \$7,581.86.

SEWERS.

One main and eight local sewers were constructed during the season, the cost of which was \$9,986.81, and the length of the same is 2.59 miles, consisting of the following sizes:

12 inches.....	0.71 miles
15 "	0.69 "
18 "	0.70 "
20 "	0.39 "
24 "	0.10 "
Total.....	2.59 "

In connection with these sewers twenty-six (26) catch basins and 40 man-holes were built. There remains under construction one local sewer that was not completed at the end of the year.

The following table shows the total length and sizes of the several main and local sewers in the city.

DIAMETER.		MATERIAL.	LENGTH.	
FEET.	INCHES.		FEET.	MILES.
	10	Clay Pipe	592	0.11
	12	" "	30033	5.69

	18	" "	61666	11.68
	20	" "	9742	1.84
	24	" " and Brick.....	6789	1.30
2	6	Brick.....	8490	1.60
3	0	"	10670	2.02
3	6	"	9220	1.75
4	0	"	9567	1.81
4	6	"	3710	0.70
5	0	"	6835	1.30
6	0	"	17992	3.40
		Totals.....	262906	49.80

STATEMENT OF UNFINISHED WORK.

The only contract that was awarded last year and not completed is under Local Sewer Improvement Resolution No. 34, upon which the time for completion has been extended.

The proximate cost of this sewer is \$728.35.

RECAPITULATION.

IMPROVEMENTS.	LINEAL FEET.	PROPERTY.	COST.	
			CITY.	TOTAL.
Streets Paved.....	9676	\$40,151 03	\$8,180 89	\$48,331 92

REPORT OF
Superintendent of Streets,
1896.

Report of Superintendent of Streets

FORT WAYNE, IND., January 1, 1897.

To the Honorable Board of Public Works:

GENTLEMEN—Herewith please find my annual report for the year 1896, showing the main details of the work done in the various departments under my supervision. Due attention has been given to the various branches of the work as they required it. All paved streets have been properly cleaned and the necessary repairs made when needed. In connection herewith I wish to call your attention to the condition of the cedar block pavement on Calhoun street, our main street for heavy traffic. The pavement there has outlived its usefulness, chiefly owing to the light nature of the material put down, and is beyond all repair. Only such patching was done during the past year as was absolutely necessary, still the expense to the city for these repairs made to this street was quite extensive. Our other cedar block pavements are in a fair condition, and with proper care will last for years to come. All of our asphalt and brick pavements are in a first-class condition and no repairs became necessary to any of them.

In order to enable me to clean our pavements promptly another street sweeper will have to be furnished, as the two

sweepers we now have will not do the work. A great many repairs to sewers became necessary, caused by the very heavy rains during the summer months. The bulk-head of the Hanna street sewer was greatly damaged by the heavy flow of the water, and extensive repairs had to be made. It is now in a better condition than it ever was, the repairs that were made there being of the most substantial character.

I herewith attach a statement showing the expenditures of the various branches of the department to have been as follows:

STREET DEPARTMENT.

Labor for hauling gravel and cinders on unimproved streets.....	\$1,266 89	
Grading College street.....	104 44	
Grading Nelson street.....	91 09	
Grading approaches to intersections on Pontiac street.....	32 32	
Grading approaches to intersections on Montgomery street.....	30 50	
Grading approaches to intersections on Jefferson and Wells streets.....	45 65	
Filling grade on West Pontiac street...	14 50	
Labor grading unimproved streets with road levelers.....	452 40	
	<hr/>	
	\$2,037 79	\$2,037 79
Cedar blocks and freight.....	\$ 500 83	
Labor repairing cedar block pavements.	595 77	
	<hr/>	
		\$1,096 60

Lumber for crossings and culverts.....	\$ 1,096 26	
Labor putting in crossings and culverts.	220 60	
		<hr/>
		\$1,289 86
Labor cleaning and repairing gutters...		3,173 45
Repairs to fountains.....		32 00
Hardware and tools.....		128 11
Tools repaired.....		200 55
Salary Superintendent of Streets.....		900 00
Horse feed.....		125 00
Tags for vehicle license.....		107 00
		<hr/>
		\$9,090 36

STREET CLEANING.

Labor cleaning brick and cedar block pavements	\$4,695 00	
Labor cleaning asphalt pavements.....	956 00	
New brooms and repairs to street sweeper.....	75 00	
Cutting weeds.....	239 00	
Sprinkling market space on Barr street.	115 00	
Salary Asst. Superintendent of streets..	720 00	
		<hr/>
		\$6,800 00

During the year we cleaned 786 miles of street pavement at a cost of \$5,651 00, an average of \$7.18 $\frac{3}{4}$ per mile. Of this total there were 391 miles of asphalt cleaned by hand, costing on an average \$2.44 $\frac{1}{2}$ per mile, and 395 miles of cedar block and brick streets cleaned by machine, costing on an average \$11.90 per mile.

SEWERS.

Labor constructing and repairing catch-basins	\$ 389 43
Repairing sewer corner Coombs and Washington streets	29 00
Repairing sewer on Murray and LaSelle streets	50 01
Repairing sewer in alley between Washington and Wayne streets from Calhoun to Harrison streets.	
Labor.....	186 51
Material.....	30 56

Repairing sewer in alley between Maumee road and Oak street from Division to University streets.

Labor.....	\$ 312 72
Material.....	56 17

Repairing Hanna street sewer bulk head.

Labor.....	\$ 287 67
Material.....	296 25

Repairing Clinton street sewer.....	\$ 12 78
Cleaning catch-basins.....	701 07
Iron covers for man-holes.....	251 84
Labor flushing sewers.....	320 10

\$2,924 11 \$2,924 11

Total expenditures..... \$18,814 47

During the year 274 street crossings have been put down averaging 42 feet in length, and 142 alley crossings averaging 14 feet in length. We also built and repaired 82 culverts of various sizes.

Respectfully submitted,

FRANK A. WEBER,
Supt. of Streets.

INVENTORY OF TOOLS.

2 Street Sweepers,	1 Fire Hydrant Pump,
3 Steel Frame Road Graders,	4 Mowing Scythes,
2 Plows,	1 Barrel Cement,
19 Mattocks,	9 Snow Shovels,
3 Picks,	1 Barrel Salt,
5 Scoop Shovels,	1 Snow Plow,
3 Spades,	1 Steam Roller,
2 Wire Brooms,	1 Horse Roller,
4 Rattan Brooms,	1 Hose Cart,
2 Hand Saws,	300 Feet of Hose,
1 Cross Cut Saw,	7 Lanterns,
2 Adz,	2 Wheel Barrows,
1 Spirit Level,	5 Asphalt Scrapers,
1 Hand Ax,	4 Garbage Boxes,
1 Square,	17 Iron Sewer Covers,
1 Trowel,	2000 Brick,
1 Log Chain,	2 Ladders,
1 Post Auger,	40 feet of Sewer Pipe,
1 Brace and Bits,	4 Oil Cans,
1 Drawing Knife,	2 Block Mauls,

1 Saw Clamp,	700 Feet of Oak Lumber,
2 Monkey Wrenches,	40 Sq. Yards Cedar Blocks,
1 Grind Stone.	

Respectfully submitted,

FRANK A. WEBER,
Supt. of Streets.

REPORT OF
Superintendent of Parks.
1896.

Report of Superintendent of Parks.

FORT WAYNE, Ind., January 1st, 1897.

To the Honorable Board of Public Works:

GENTLEMEN—I herewith submit to you the annual report of the Department of Parks for the year 1896, showing in detail the improvements made in each of the city's parks during the past year, as well as the condition of each park at present.

NORTH SIDE PARK.

This park covers an area of thirty and one-fifth acres and is located just north of the St. Marys river, between Clinton street on the west and Spy Run avenue on the east side. At the Spy Run avenue entrance we find the beautiful monument erected in memory of the soldiers of Allen county that fell during the war. All greenhouses belonging to the city are located in this park, and all flowers and plants used in ornamenting the various parks during the summer months are propagated and raised here. There are four greenhouses in number, three of them being twelve feet wide and seventy-five feet long, and one being twenty feet wide and seventy-five feet long. All of the houses are heated by two hot water boilers of improved pattern, a Carmodey eight-section boiler, with 1,350 feet of two-inch pipe supplying the three smaller ones, while an internally fired hot water all-steel boiler, shell forty inches in diameter by eight feet long, with 450 feet of two-inch and 185 feet of three-inch pipe furnishes heat for the larger house. The last named heating apparatus was put in during the past year at a total expense of three hundred and fifty dollars and is so constructed that it can supply heat to two additional houses. In connection with the greenhouses is a building fifty-six feet long by twelve feet wide, divided into three rooms. A shed used as tool room and shelter for the pack wagon is located just north of the greenhouses. In addition to the greenhouses we have five large hot beds and thirty-four sash, six feet long and three feet wide. All buildings are in good condition, having just been thoroughly repaired during the past year, using six boxes of 12x16 window glass in reglazing, 25 lbs of white lead, 2 gallons of linseed oil, two barrels of lime, 100 lbs. of nails.

Six hundred and seventy-five feet of flower benches four

feet wide have been rebuilt in the greenhouses during the year. The growing demand for plants and flowers in our parks compelled us to increase our stock every year, so that now our greenhouses are taxed to their utmost capacity. Our present stock for this spring's planting consists of:

3,300 geraniums of different varieties.		
1,200 coleus	"	"
14,000 alternantheras	"	"
6,000 eckavereas	"	"
5,000 canna bulbs	"	"
300 caladium bulbs.		
2,000 bedding blants, mixed.		
10 agarfer plants.		
1 orange tree.		
1 fig tree.		
4 banana plants.		

We badly need an additional greenhouse this spring, and I would respectfully recommend that one be built as soon as possible.

During the year we laid 150 feet of one and one-half inch water pipe from Fifth street into the greenhouses, raised 150 feet of brick sidewalk on Spy Run avenue one foot and relaid it, graveled all the walks and driveways in the parks, using 222 loads of gravel, besides keeping trees, shrubs, plants, flowers and grass in first-class condition. Sixteen thousand plants and flowers were planted here last spring. During the fall we planted the following young trees in this park:

Norway Maple	65
Hard Maple.....	37
Silver Leaf Maple.....	5
Carolina Poplar.....	5

Box Elder.....	16
American Elm.....	25
Mountain Ash.....	8
Linden.....	19
<hr/>	
Total.....	180

The total number of trees now in this park is 838, consisting of the following varieties:

NATURAL GROWN TREES.

Hickory.....	3
Buckeye.....	2
Hackberry.....	3
Oak.....	4
Locust.....	10
Walnut.....	20
Wild Cherry.....	2
Sycamore.....	5
<hr/>	
Total.....	49

The following varieties of trees and shrubs have been planted in this park :

Sugar maple.....	214
Norway maple.....	138
Cutleaf maple.....	20
American elm.....	64
Camperdown elm.....	3
Catalpa.....	34
Mountain ash.....	20

SWINNEY PARK.

This, the largest of our parks, is located in the western part of the city, and covers an area of $45\frac{1}{4}$ acres. Hardly three years have passed since this beautiful site along the St. Mary's river was selected for a park and has already become a favorite resort of our citizens. The large grove comprising the northern portion of this park is almost surrounded by water and contains a dense cluster of large natural grown trees, making it the most beautiful spot the city owns. The excellent driveways and walks, the many shady spots provided with seats, the lawn tennis courts, the river banks with its change of scenery, serve to form attractions for thousands of people during the hot summer months. Family picnics held in the grove are a daily occurrence during these months.

The improvements made in this park during the year chiefly consists of the grading of 73,146 square feet of driveway and giving it a coat of gravel to the depth of ten inches, grading 9,360 square feet of walks and coating it with gravel to a depth of six inches, grading 2,400 square feet of walk

and coating it with gravel to a depth of eight inches, the gravel in all cases being well rolled. The unusually heavy rain storms of last summer caused several washouts, necessitating extra expense in making repairs and constructing sewers for protection against a recurrence of trouble of this sort. Two first-class lawn tennis courts were constructed, each 90 feet long by 36 feet wide, one of them being covered with gravel heavily rolled, the other being sodded. A new floor was laid in the pavillion on picnic grounds.

The following list shows the number of various trees planted during the past year :

Sugar maple.....	25
Norway maple.....	10
Silver leaf maple.....	5
Carolina poplar.....	10
Mountain ash.....	2
	—
Total	52

The following is a list of natural grown trees:

Sycamore	109
Walnut	38
Locust	93
Elm	83

McCULLOCH PARK.

This park is located in the southwestern portion of the city, on Broadway, and covers an area of four acres. A cluster of fine natural grown trees with their shade, the large fountain with its basin, beautiful flowers and plants, cause residents of that neighborhood to feel proud of their park, though small it be. Fifteen thousand plants and flowers were planted here last spring.

All walks were graveled and everything kept in first-class condition. The trees planted here last fall were :

BENEDICT & CO. CH.

MCCULLOCH PARK.

RESERVOIR PARK.

Reservoir Park, covering an area of 13 acres, is located in the southern part of the city. Part of the eastern portion of it is taken up by the City Water Works Reservoir, this being the highest point in the city. Nearly all the western portion is taken up by an artificially constructed lake, the average depth of which is about three feet, and the water being supplied by the water works reservoir.

During the winter months this lake affords good skating to thousands of people, giving them a pleasing as well as healthful recreation. An island covered with shade trees and made accessible by a rustic bridge is quite an attraction during the summer months. During the past fall ten large sugar maple trees were removed from the court house square and planted on this island. All walks were graveled, 14,500

square feet of terrace sodded and everything kept in first-class condition. The following trees were planted last fall :

Sugar Maple.....	10
NorWay Maple.....	5
Carolina Poplar.....	10
Large Sugar Maples from Court House Square.....	10
	—
Total.....	35

The following is a list of the various kind of trees now in this park :

Norway Maple.....	30
Sugar Maple	106
Silver Leaf Maple.....	7
Cut Leaf Maple.....	2
Poplar	52
Linden.....	3
Shrubs.....	5
	—
Total	205

HAYDEN PARK.

This park, covering an area of one and twelve-one-hundredth acres, is located in the eastern part of the city. Although small, it is a very attractive little spot, the large fountain with its basin, the nice graveled walks, the well sodded lawns, beautiful trees and shrubs, plants and flowers, all serve to make it one of the most beautiful parks the city has got. Last spring 7,000 plants and flowers were planted here, and during the fall the following trees were planted :

HAYDEN PARK.

Norway Maple.....	5
Box Elder.....	5
Linden.....	4
Large Sugar Maple trees from the Court House Square...	2
	—
Total	16

The park now contains the following trees :

Total	184

OLD FORT PARK.

This park, covering only eighteen-one-hundredths of an acre, is located at the corner of Main and Clay streets, in the central portion of the city. Near by are the forks of the St. Joe and St. Marys rivers, and here is where the fort of General "Mad" Anthony Wayne, so closely connected with the early history of the northwest, stood. Its name will ever be mentioned in history in connection with the settling of the great northwest, and in order to preserve the historic site where the old fort stood, it was dedicated to park purposes.

Last spring eight hundred plants and flowers were planted here. The following trees are in this park :

Pine	2
Sugar Maple.....	11
Cut Leaf Maple.....	4
Mountain Ash.....	1
	—
Total	18

All shrubs and trees in all of our parks and all of our plants and flowers are in a good, healthy and growing condition.

I herewith express my sincere thanks to His Honor the Mayor, and the Board of Public Works, for the kindness and good will shown to all connected with the Department of Parks during the past year.

Respectfully submitted,

AUGUST GOERS,

Superintendent of Parks.

I herewith attach an inventory of all tools owned and used by Department of Parks :

AT NORTH SIDE PARK.

800 feet $\frac{3}{4}$ -inch garden hose.

3 weed hoes,	3 files,
6 sod edgers,	1 vice,
6 weed gougers,	1 plane,
2 fork spades,	3 grass shears,
1 fork,	1 hedge shears,
2 spades,	1 monkey wrench,
10 wooden rakes,	2 pipe wrenches,

3 steel rakes,	1 hatchet,
4 scythes and snaths,	2 hand axes,
2 sickles,	4 oil cans,
2 picks,	2 trowels,
3 mattocks,	1 hammer,
4 hand lawn mowers,	1 chisel,
1 one-horse lawn mower,	2 coal scuttles,
1 one-horse weed plow,	1 saw set,
1 one-horse wagon,	1 grind stone,
3 wheel barrows,	1 ax,
1 step ladder,	1 lantern,
1 twelve foot ladder,	1 lamp,
1 cross cut saw,	1 lawn mower sharpener,
1 boat (Reservoir Park lake)	1 table,
2 snow shovels,	1 desk,
2 hand saws,	8 chairs,
1 draw knife,	1 stove,
1 square,	1 bedstead & bedding complete
1 screw driver,	4 thermometers,
2 whitewash brushes,	3 planting trowels,
2 paint brushrs,	2 towels,
34 hot bed sash and glass,	1 hand cart,
2 boxes 12x16 window glass,	8 lawn sprinklers,
2,500 flower pots aside from those now in use,	2 sprinkling cans,
24 plant vases,	2 wagon loads fertilizer,
6 yards leaf mould,	12 yards potting soil,
2 wire sieves.	

SWINNEY PARK.

2 two-horse dump scrapers,	1 lawn mower,
1 one-horse dump scraper,	1 hay fork,
1 Buckeye mower,	2 shovels,
1 one-horse rake,	1 hand ax,
1 hand roller,	1 sickel,
1 sod cutter,	1 spirit level,
5 wooden rakes,	2 scythes and snaths,
1 steel rake,	1 wheel barrow,
2 picks,	1 hand cart,
2 mattocks,	1 oil can,
2 sod edgers,	2 whet stones,
1 ax,	1 grind stone,
1 sledge hammer,	1 hose clinch,
2 weed gouges,	1 pike pole,
1 hoe,	1 chair,
1 crow bar,	1 mole trap,
2 water buckets,	3 files,
	1 monkey wrench.

JOHN TREMMEL,	- - - - -	City Poundmaster.

Department of Public Safety.

FORT WAYNE, IND., January 1, 1897.

To the Honorable Henry P. Scherer, Mayor of the City of Fort Wayne, Ind.:

DEAR SIR:

In compliance with the City Charter, the Board of Public Safety submit the Third Annual Report for the year ending December 31st, 1896.

We have caused an inventory to be made of all the property controlled by this department, which will be found in detail in the reports of the Chief of the Fire Department and Superintendent of Police. These reports have been carefully made and are, as we believe, quite complete in giving the conditions of their respective departments.

We ask a careful consideration of the recommendations they make, which meet with our approval, and are, as we believe, for the best interests of the city.

POLICE FORCE.

When the present Board of Public Safety assumed charge of this department, they recognized the fact that to make the force efficient it must be kept non-partisan, and we have acted

with that aim in view, making removal for the good of the service when we felt called upon to do so. We are confident that the city has never had so efficient a force as at the present time.

They are a well drilled, competent body of men, up to the standard in age, height and weight. In their new uniforms and frock overcoats they make a fine appearance.

FIRE DEPARTMENT.

Taking into consideration the size of our city and the limited number of firemen, we have been exceedingly gratified with the work of the department. The men are efficient and industrious, keeping the different houses, the machinery and horses in admirable condition. When the finances of the city will warrant, we believe that the force should be increased in conformity with the recommendations of the Chief. The men in this department, as well as in the Police Department, realize the importance of thorough discipline. They are instructed to avoid the use of liquor, not to loiter around saloons or public places, and to be gentlemen in every sense of the word. The city can take pride in these departments as they exist today.

The Board and officers of these departments have demanded of the men that they shall be polite and respectful, neat in appearance as well as courageous and watchful in the performance of their duties, being aware that their conduct is always open to public criticism. As a rule the Board believes the men have lived up to these requirements.

The Board on numerous cases have been called upon to act as a collection agency for debts due by some of the men

before they entered the service of the city. We have and shall decline to act in this capacity. We, however, insist that all debts contracted for by men in the service of the city shall be promptly paid.

Respectfully submitted,

CHARLES McCULLOCH,

A. I. FRIEND,

GEORGE H. WILSON,

Board of Public Safety.

REPORT OF
POLICE DEPARTMENT,
1896.

Report of Superintendent of Police.

OFFICE OF SUPERINTENDENT OF POLICE, }
CITY HALL,
FORT WAYNE, IND., Dec. 31, 1896. }

To the Honorable Mayor and Board of Public Safety:

GENTLEMEN—I have the honor to submit herewith the annual report of the Superintendent of Police for the year ending December 31st, 1896, and with it I wish to make a few recommendations, and trust the Board will consider the necessity of adopting the same at the earliest moment practicable.

The year just closed and the new one beginning finds the department in good condition and on the line of improvement. The discipline of the force is excellent. The changes that have been made have been beneficial to the force; the men all take an interest in their work, and are anxious to become efficient in their line of duty.

RECOMMENDATIONS.

The first, and by far the most important recommendation I desire to make to the board is for a larger force. To afford police protection to the 50,000 population in this city, we have twenty-five patrolmen available, and enjoy the distinction of being the only city in the United States that has one patrolman to every two thousand inhabitants. The law requires

all cities who work under the metropolitan plan to have one patrolman to every one thousand inhabitants. Reports from other Superintendents and Chiefs of Police, in my office, show that some cities have one patrolman to each seven hundred and fifty population. Our patrolmen are divided as follows: For day duty, seven; for night duty, eighteen.

A reference to page 40, rules and regulations of the Police Department (copy enclosed), gives the boundaries of the different police districts; this will give the board an idea of the amount of territory to be covered by each patrolman.

The inadequacy of this number of men for the service required of them is so forcefully self-evident that I need not dwell upon it. Therefore, on this important matter I would earnestly recommend that the Board and Common Council so arrange the levy for next year as to enable them to increase the police force at least ten men. This increase, if granted, will not put the department on a footing of the requirements of the metropolitan forces, of one patrolman to each one thousand population.

I would also recommend that some arrangement be made by which the operating room at the headquarters might be more private. The disadvantages of this room in its present location is quite apparent and has been explained to the Board heretofore. There can be absolutely no privacy, and any orders or instructions given to the officers over any of the telephones can be overheard on the street. More especially is this true in the summer time, when it is necessary to lower the windows for proper ventilation. Orders and instructions given to the officers should be for their ears alone, and not a matter for the passers-by to hear and speculate upon. This

recommendation, if favorably considered by the board, will be very beneficial to the department.

UNIFORMS.

During the year some changes have been made in the uniforms worn by the officers. The old style standing collar blouse having been abolished in favor of the regulation military blouse with collar, and the cape overcoats being replaced by the regulation military frock overcoat. The result has been a great improvement in the appearance of the men and a marked advancement in the general efficiency of the force.

In regard to this branch of the department I would recommend that arrangements be made with the Comptroller by which he will be authorized to pay for cloth for uniforms for the force, after the same has been purchased by the Superintendent of Police, and that the men can repay him for the money so expended.

In purchasing new overcoats for the force this year, we were, through the kindness and influence of Mr. A. I. Friend, Secretary of the Board of Safety, enabled to order cloth direct from the mills, which was cut and sold to the men at the same price paid for it per yard.

The advantages of this plan in securing cloth for new uniforms are many. It insures to the patrolmen the very best of goods at a price lower than the tailor must pay for it. It insures uniformity in color, a very important factor in the blue uniform. The patrolman can take it to any tailor he desires, so long as the tailor complies with the specifications in making it up. The uniforms will be exactly alike and no different shades of blue. This plan has been satisfactory with

the men on the force. Therefore I recommend that it be adopted.

RULES AND REGULATIONS.

There being no rules and regulations governing this department, excepting those given verbally and handed down by custom, your Superintendent was instructed to compile a book of rules to govern the force and present them for the action of the Board.

In accordance with these instructions, I prepared a book of rules and regulations governing the force, presented them to the Board, and they were approved and adopted on June 7, 1896, a copy of which is herewith enclosed.

Each member of the force carries this book with him constantly while on duty, and as all matters contained therein pertain to his duty, he finds it a very convenient book to have.

I would recommend that a new set of harness be purchased for use in this department. The old set, while not entirely worn out, is liable to become useless at any moment, and thereby cause serious inconvenience if not actual mishaps. They have been in the service quite a long time. The leather is cracked and inclined to rot.

I would also recommend that if the old patrol wagon can be repaired and made useful with a small outlay of money, that this be done, and that it be stored in some safe and dry place where it will be taken proper care of. It will be quite useful in case of an accident to the wagon now in use. This is quite necessary, as the new patrol wagon has been to the shop for repairs five times since last May.

DETECTIVE FORCE.

The detective branch of the Police Department is no longer considered an experiment.

The citizens recognize and appreciate this branch of the force, and we are called upon to investigate every class of crime committed, from stealing pigeons and chickens to murder.

With the present detective force it is often impossible to investigate all cases as reported, many of which would be easily cleared up could they be taken charge of immediately, but through forced neglect they become quite troublesome, and often end in a complete failure, for which we and the department in general are censured.

Our work demands prompt and continued attention. When a clue has once been obtained, the officer should not be compelled to leave that work to investigate some other case, but another man should be there to look after it. Therefore, I would recommend the appointment of one more man to assist in this very important branch of the police duty.

Detective George Coling, occasionally assisted by other officers, did the work of this department, which has been entirely satisfactory to myself, and I trust equally so to the Board. I would recommend and urge the Board to adopt the Bertillion system of measurements and identification of criminals. With the assistance of identification there is but little chance of making mistakes in the identity of criminals. It is the one branch of the detective art raised to the level of an exact science.

The salient points are :

First—The person that is measured is mathematically identified.

Second—No two persons measure and classify alike, any more than two persons look exactly alike.

Third—The measurements never change (not even in death), provided the person is full grown at the time, twenty-two years.

Fourth—The classification is based on head measurements, and holds good at the age of eighteen years, as the skull is full grown at that time.

Fifth—The subject has no control over the bone joints; he can neither add to nor subtract from them.

The question may be asked, Why is the Bertillon system so important?

First—Habits and customs change; the features of a person, which make the photograph an important factor, change after lapse of time.

Second—By the old method, you can find the criminal by his name only.

If, after fifteen or twenty years, he comes back, changed in appearance, forgotten, under a different name, how are you going to find and identify him?

Third—To say that you know a man is not establishing his identity.

Fourth—The most important fact is that the system never fails—and the criminal knows this and fears it.

Our department would be very much benefitted by the adoption of this system.

We could refer to Cincinnati's collection of 8,000 measurements, to Chicago that has still a larger collection, and, in fact, to any place where it is in use, without taking chances of mistaken identity.

By conforming our system to those cities using the Ber-

tillon method, we will be in closer touch, and have a gigantic collection to draw from.

This system can be placed in our department, and a man instructed in its workings for somewhat less than one hundred (\$100) dollars.

I wish to say in conclusion that I believe the Fort Wayne Police Department will compare favorably with any other department in the country of the same size, and I am sure that for gentlemanly deportment, efficient service, and attentiveness to duty, the members thereof cannot be excelled.

I desire to thank His Honor, the Mayor, and the Board of Public Safety for the many favors shown me during the past year; also the Common Council and city officers for their many kindly acts and uniform courtesy.

The following statistical table will show in detail the work done by the department during the year, all of which is respectfully submitted.

H. A. GORSLINE,
Superintendent of Police.

Fort Wayne Police Force.

REPORT OF
FIRE DEPARTMENT.
1896.

Report of the Chief of the Fire Force

FORT WAYNE, Ind., Jan. 1st, 1897.

To the Honorable Board of Public Safety:

GENTLEMEN—I herewith submit to you the annual report of the fire department for the year ending December 31st, 1896. This report will be found to contain statements in detail of the condition of the department, a record of all fires and alarms that have occurred during the year, the loss on property and the insurance, as nearly as could be ascertained, together with such recommendations as I believe necessary to increase the efficiency of this department.

FIRES.

During the year the department responded to one hundred and four alarms. Loss by fire amounted to \$17,207; insurance on the property, \$309,000; insurance paid, \$15,682.

MANUAL FORCE.

The force of the department at present consists of forty-six men, as follows: One Chief, one Electrician, six Captains, six Engineers, fourteen drivers, seventeen Hosemen and one telephone Operator.

APPARATUS.

The apparatus in service consists of five steam fire engines, five hose wagons, one four-wheel hose carriage, one chemical engine, one aerial extension ladder truck, one city hook and ladder truck, one Chief's wagon, one fire alarm repair wagon.

HORSES.

There are thirty-two horses in service. They are in good condition with the exception of a few that are old, and they should be replaced by young horses. Four horses were purchased during the year, giving in part payment four unfit for the service.

HOSE.

There are in the department 10,750 feet of cotton hose; about one-half is first-class, the rest has been in use for some years, and is not reliable. I would recommend the purchase of 4,000 feet this year.

FIRE ALARM TELEGRAPH.

This very important branch of the Fire Department has been kept in perfect order under the management of Electrician Schroeder. Two new boxes have been added. The system consists of thirty-three miles of wire, sixty-three public alarm boxes and three private alarm boxes, one hundred and forty battery cells, one bell striker, six combined gongs and indicators, and one automatic eight circuit repeater.

ENGINE HOUSES.

ENGINE HOUSE No. 1.

The Central Station of the fire department is located on Main street between Barr and Lafayette streets. The building is a

two-story brick. The apparatus of this house consist of one first-class double Amoskeag engine, with a capacity of seven hundred gallons per minute, one hose wagon, one aerial extension ladder truck, one chief's wagon, one fire alarm wagon, nine horses, and twelve men. The repair shop connected with this building is equipped with a three-horse power gas engine, one eighteen-inch Lodge & Davis lathe, one twenty-inch swing upright Lodge & Davis drill press, one eight-inch emery wheel, one forge, anvil and vises. All the repairs to engines are made in this shop and nearly all repairs to other apparatus.

ENGINE HOUSE No. 2.

Is located on Wallace street, between Lafayette and Clay streets. The building is a two-story brick. The apparatus of this house consist of one first-class Silsby engine. This engine is old and not reliable, and should be replaced by a new engine at once. One hose carriage, one hook and ladder truck, seven horses, and eight men.

ENGINE HOUSE No. 3.

Is located on West Washington street, between Harrison and Webster streets. The building is a two-story brick. The apparatus of this house consist of one double fifty-gallon Champion chemical engine, one hose wagon, four horses, and six men.

ENGINE HOUSE No. 4.

Is located on Maumee avenue, between Ohio and Chute streets. The building is a two-story brick. The apparatus of this house consist of one third-class double La France

engine with a capacity of 650 gallons per minute, one hose wagon, four horses and six men.

ENGINE HOUSE No. 5.

Is located on Broadway between Hendricks and Lavina streets. The building is a two-story brick. The apparatus consist of one third-class double LaFrance engine, with a capacity of 650 gallons per minute, one hose wagon, four horses and six men.

ENGINE HOUSE No. 6.

Is located at the corner of Third and Wells streets. The building is a two-story brick. The apparatus consist of one third-class double LaFrance engine, with a capacity of 650 gallons per minute, one hose wagon, four horses and six men.

RECOMMENDATIONS.

I would recommend to increase the force of the department, especially at the Central Station, for the aerial extension truck. This truck at the present time is manned by two men, a driver and tillerman, and it requires eight men to raise the main ladder. I would recommend to add at least three men to this truck. I do not believe there is another city in the United States running an aerial truck with but two men. I again renew my recommendation to remove the Lowry hydrants and replace them with post hydrants. The underground hydrants are not reliable and too complicated for fire use. I would also recommend that the number of hydrants be increased in the business or manufacturing districts, so as

to have at least a hydrant at the intersection of all streets, also hydrants at alleys near large business blocks, in the districts described. Hydrants at the following locations are badly needed: At the corner of Berry and Clinton streets, corner of Main and Court streets, on Columbia street between Calhoun and Harrison streets, corner of Harrison and Pearl streets, on Calhoun street between Wayne and Washington streets, on Calhoun street between Washington and Jefferson streets, corner of Calhoun and Baker streets, corner of Hanna and Hough streets.

I would recommend that about fifteen miles of hard drawn copper telegraph wire be purchased to replace the iron wire which is old and has been in service many years.

I wish to call your attention to the necessity of an engine house for that portion of the city known as South Wayne, and one in that portion known as Nebraska. The demand for these improvements are simply a result of the city's rapid growth. These districts should have the same protection as other parts of the city. I would recommend that lots be purchased for this purpose as soon as possible. I also recommend to purchase the lot adjoining the Central Engine House, It will not be long when it will be necessary to have in this department one extra engine and a supply wagon, and it will not be many years when it will be necessary to place a water tower in the service, and all of these apparatus should be placed at the Central Station. We also need more store room; as it is at present we have no room to store apparatus.

In conclusion I wish to express my thanks to His Honor, the Mayor, and the Board of Public Safety for the support given me in increasing the efficiency of this department; to the

Superintendent and members of the police force for valuable assistance rendered at fires, and to all city officials for courtesies shown me. To the officers and members of the Fire Department my thanks are especially due for the satisfactory manner in which they have performed their duties.

Respectfully submitted,

HENRY HILBRECHT,
Chief of the Fire Force.

INVENTORY.

REPORT OF
CITY WEIGHMASTER,
1896.

Report of City Weighmaster.

FORT WAYNE, Ind., January 1st, 1897.

To the Board of Public Safety:

GENTLEMEN—I herewith submit to you a statement showing the receipts of the city scales during the year 1896 to have been as follows :

January	\$ 155 00
February	118 00
March.....	112 10
April	140 60
May	134 50
June	164 10
July	147 20
August.....	146 90
September.....	143 20
October	223 00
November	173 20
December.....	132 40

Total\$1,790 20

All monies were turned over to the city Treasurer by me, and I hold his receipt for same.

Respectfully.

HENRY BUTKE,
City Weighmasterr

REPORT OF
CITY MARKETMASTER.
1896.

Report of Marketmaster.

FORT WAYNE, Ind., January 1st, 1897.

To the Board of Public Safety:

GENTLEMEN—I herewith submit to you my report of receipts for rental of market stands during the year 1896.

Receipts of sale of space for the whole season.....	\$ 728 50
“ “ Daily collections.....	331 50

Total\$1,060 00

All monies have been turned over to the city Treasurer, and I hold his receipt for same.

Respectfully,

WILLIAM ROPA,
Marketmaster.

DEPARTMENT OF
Health and Charities.

1896.

REPORT OF

THE

Department of Health and Charities

MEMBERS OF THE BOARD.

DR. A. J. KESSLER, Secretary.

DR. JAMES E. MILLER.

DR. CARL SCHILLING, Chairman.

For the Year Ending December 31st, 1896.

Department of Health and Charities

FORT WAYNE, IND., December 31st, 1896.

To the Honorable Henry P. Scherer, Mayor of the City of Fort Wayne:

DEAR SIR—We, the Board of Public Health and Charities, have the honor to present to you our first annual report for the fractional part of the year beginning May 1st, 1896, to December 31st, 1896. The Board appointed by you, Carl Schilling, M. D., J. E. Miller, M. D., and A. J. Kesler, M. D., organized under the city charter by electing A. J. Kesler secretary and registrar of vital statistics. The persons appointed by the Board to engage in the different divisions of the department during the past eight months were as follows :

One Chemist, who has charge of the City Laboratory and makes all microscopical and analytical examinations for the city, and three Sanitary Policemen or Inspectors, who are under the instructions of the Board and are expected to attend to any and all duties the Board may see fit to have them do for the benefit of the health and comfort of the city. We are aware that there have been and still exist several nuisances, which are a menace to public comfort and health, such as gas escap-

ing from leaks in mains and obnoxious odors from packing houses, which penetrate the houses and salute the noses of the citizens in their vicinity. Another, which we will give some attention in the future, is the great number of smoke stacks from the manufacturing institutions of the city from which the smoke is allowed to float over the city into open windows and doors, damaging and soiling household goods, suffocating and annoying the sick, especially those suffering from lung trouble, and discomforting the people within its reach. Smoke stacks and furnaces should be supplied with screens or smoke consumers. The Common Council will be asked by this Board to give us an ordinance by which we may suppress any and all nuisances of this kind that are a menace to public comfort. And hereafter the Board will consider a menace to public comfort a menace to public health and both will be treated alike.

GARBAGE.

Into what kind of a vessel should our citizens deposit their garbage? Should the system which has been in use, that of using all kinds of receptacles, which is faulty and dangerous, be continued, or should the use of uniform boxes made of galvanized iron, or wooden boxes lined with galvanized iron, which can be easily cleaned and disinfected be inaugurated? Ordinary wooden boxes for the reception of garbage are dangerous; they are easily broken and the collector will as often find the garbage on the ground as deposited in a proper box. We know that with a proper garbage box, uniformly used, and with a proper and careful collection of garbage that the city will be in a better sanitary condition and less inviting to disease than it has ever been before, and we hope and believe

that these reforms will be inaugurated by the Honorable Board of Public Works as soon as possible.

SEWERS.

We all know that various germs of disease are reared and thrive in sewers. All connections leading from sewers to vaults and cellars should therefore have proper traps, as without them germs and disease will find their way into houses and closets. Sewers, especially in dry weather, should be flushed at least once every two weeks, and when old sewers are to be repaired, rebuilt, or reopened, they should be thoroughly flushed and disinfected before being opened. For information as to the kind of disinfectant, or germicides to be used, apply to City Bacteriologist. The Board will insist on these rules being carried out. Also newly dug sewers or trenches should not be allowed to stand open longer than necessary. The man-holes and catch-basins should be carefully looked after, as they easily become a source of sickness and contagion.

THE IMPROPER PLACING OF HYDRANTS.

People having hydrants placed should at the same time have a drain constructed for carrying off waste water. There are not a few in the city which, probably by carelessness, allow their hydrants to run and overflow sidewalks and gutters, forming unhealthy water pools.

QUARANTINE OF CONTAGIOUS DISEASES.

Contagion has prevailed during the last eight months to a moderate degree, that of diphtheria and scarlet fever taking

the lead. At one time it became somewhat alarming, especially in the Seventh and Tenth Wards, so much so that we were compelled to close the schools in that locality during last October. They were kept closed for two weeks, until the disease had abated. It had its effect, as since that time there never were more than five to eight cases at any one time in the city. We want to thank the medical fraternity for their kind assistance during the past eight months, also for the promptness with which they have reported all contagious or doubtful cases to the Board of Health. When a case of diphtheria is reported, the City Chemist immediately goes to the house and gives quarantine instructions, also securing a culture from the throat of the patient. He returns to the Laboratory and makes his examination, and if diphtheria is found to be present he immediately telephones this fact to the attending physician. He also instructs a Sanitary Officer to put up a diphtheria card on the house in a conspicuous place. He also instructs the family that they must stay in the house and allow no one to enter; that if they have cats or dogs they must be kept in the house and not allowed to run about, as dogs, cats, chickens, etc., are liable to spread diphtheria. The Sanitary Officer calls at the house once a day to see if there is anything wanted in the way of food or medicine, and if so, he gets it for them. This quarantine is kept up for two weeks, and longer if necessary. If death occurs, the body is buried within twelve (12) hours thereafter. We do not allow public funerals, and no one but the father and mother are permitted to attend. Those who have had diphtheria are not allowed to go to school again until four weeks after the diphtheria card has been removed from the house, while those not having it are allowed to go to school with-

in two weeks after the card or quarantine has been removed. After the diphtheria card has been up two weeks and the patients are reported well by their physician, our Chemist goes to the house and examines the throats of all that have been quarantined. If throats are all found clear he instructs the people to take up the carpets, scrub floors and wood work, burn or wash and boil all clothing, disinfect glass, spoons, dishes, etc. After this has been done, he disinfects the house with a strong solution of carbolic acid.

THE USE OF ANTI-TOXINE.

The use of anti-toxine in the treatment of diphtheria is endorsed by the leading physicians of the country, and for some time has been in general use in Fort Wayne. Almost 50% of the diphtheria cases treated during the past eight months were treated with anti-toxine. Total number of cases of diphtheria during the past eight months, one hundred and forty-two (142); number of deaths, twenty-six (26); deaths following the administration of anti-toxine, five (5). Three of the latter patients who had had the disease for four days before anti-toxine was used died the same day. One had the disease for six days; died the same day that anti-toxine was used. One five days; died in twenty hours after the use of anti-toxine. Cases treated with anti-toxine, sixty-six (66); death rate 7 5-10 per cent. Cases treated without anti-toxine, seventy-six (76); deaths, twenty-one (21); death rate, 28 per cent.

Twelve cases out of the twenty-six that were fatal were treated by physicians who do not believe in the use of anti-toxine.

SCHOOLS.

We have within the last week visited the schools of our city for the purpose of inspecting the sanitary conditions, etc. We have found most of the schools in a perfect sanitary condition; others we cannot boast of, they being not what they should be. Some of the schools are too crowded, we finding from seventy to one hundred children in some of the rooms, which is entirely too many. Ventilation in some of the rooms is imperfect, while others are filthy. Some of the schools use water buckets, from which children, one after the other, are allowed to dip in and drink. This dangerous practice should be discontinued in all schools, as one child infected with diphtheria and drinking therefrom, can in this way distribute the germs into the throats of others. Glasses should be provided for the children to drink from and the water should be drawn from a faucet, a glass at a time. Glasses should be sterilized once or twice a day for protection against infection. School rooms, desks, etc., should be scrubbed with soap and water once a week. Teachers who are threatened with or who have consumption should not be allowed to teach in our schools. The spittle which is thrown from their lungs will be deposited on the floor and allowed to dry with the dust, and in that way the tubercle may find its way into the pupils' lungs. It would be well for those employing teachers to bear this in mind, and a certificate of health from a physician, in our judgment, would not be out of place, but a protection to our children. The Board of School Trustees of the various schools will be notified by the Board of Health after our next meeting as to the condition in which we found the schools, and what we found contrary to sanitary laws and the health and comfort of

the scholars. They will also be asked to put their schools in a perfect sanitary condition as soon as possible.

A CONTAGIOUS DISEASE HOSPITAL.

The most urgent need of the Health Department is a suitable house for the isolation of patients suffering from contagious diseases. "The County Pest House" is a pest house only in name, and to send a patient there would be little short of wilful carelessness. The two public hospitals positively refuse to receive patients suffering from commutable diseases. Diphtheria frequently breaks out in large hotels, and if we enforce quarantine laws, business must be suspended, and guests kept in retention for a period of time. Such must be the attitude of the Board if protection to the public is to be given. That such measures cannot be employed are self evident. A case in point is as follows: Diphtheria broke out in the Grand Central Hotel. The girl, a servant, had no relatives in the city, and the case was turned over to the Board of Health. The members of the Board, realizing the necessity of removing the patient from the place, after trying to rent a house within the city limits and finding none available, secured a house two miles west of the city at a cost of fifteen dollars (\$15) a week and employed a nurse at a cost of twelve dollars (\$12) a week to attend the patient. This case was taken care of at an expense of \$100 to the city. The only avenue open was the one pursued, and because of the urgency of the case, had to be carried out without regard to cost.

Our quarantine laws require heads of families to discontinue their daily work if a contagious disease exists in their families. Great expenditure might be saved by removing

these patients to a hospital, not only relieving the house from quarantine and allowing the father or mother to continue their daily employment, but having removed the patient during the stages of the disease the other members of the household would not be in constant danger of contracting the disease.

What would Fort Wayne do if a tramp infected with small-pox should wander into the police station? While we have regard for his safety and well being, our first thought would be to protect the community from this disease. The establishment and maintenance of an emergency hospital for the care and isolation of cases contagious in character, is, in our opinion, a provision which would not only insure against great financial losses but would make epidemics less apt to occur. We believe the city government, after investigation, will lose no time in complying with this request.

Respectfully submitted,

A. J. KESSLER,
Secretary.

A. J. KESSLER,

Secretary.

REPORT OF THE
MUNICIPAL LABORATORY,
1896.

Report of Municipal Laboratory.

CONTAGIOUS AND INFECTIOUS DISEASES.

In the suppression and regulation of contagious diseases, diphtheria has as heretofore claimed first attention. The culture test for the diagnosis of diphtheria was very generally employed, and has proven itself to be of the greatest value in the diagnosis of suspicious throat cases. Errors have occasionally occurred, due to contaminated culture food, delay in returning the sets to the station, improper inoculation and apparently perverted forms of the diphtheria bacilli. Frequent observations have led to the conclusion that the form of the bacillus found in the culture test depends directly upon the virulence, the short, thick form more nearly approaching the type of the pseudo-bacillus. It seems justifiable to think that in some cases where microscopic examination of the colonies is inadequate, it is necessary to control the diagnosis by the experimental use of anti-diphtheritic serum.

The cases for the most part have been of only moderate severity. Antitoxine has been pretty generally used, and a low mortality is the reward. The quarantine regulations are severe, and disinfection of all houses is done under the direct supervision of the City Bacteriologist.

The table below gives the number and character of cases examined during the year.

	Jan.	Feb.	Mar.	April	May	June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Total

Scarlet fever has occurred in the past eight months in its mildest form, has not become epidemic and was little source of worry. Measles likewise was of rare occurrence.

In September the Board of Health, realizing the contagion of consumption, and noting the terrible death rate from this malady, took the initial step toward a better control of the disease. That tuberculosis is a germ disease and that it is transmitted from sick to well are established facts. The character of the disease being usually of long duration makes it the most difficult to control. The greatest necessity in the control of any contagious disease is to locate the disease. The next thing of importance is to recognize the disease early. These have been found to be both possible only with the co-operation of the physicians in charge of consumptive cases. The microscope tells early whether the case is one of consumption or not, and the services of the City Bacteriologist were placed at the disposal of the physicians without charge. The following circular letter distributed to each physician in the city is self-explanatory:

BOARD OF PUBLIC HEALTH, CITY HALL,)
FORT WAYNE, IND., Sept. 30th, 1896.)

DEAR DOCTOR:

You are aware that tuberculosis is strictly a contagious disease, and can be prevented, providing the proper sanitary regulations be adopted. Therefore, after September 30, 1896, the Board of Public Health, in the interest of the public safety, demands that all cases of pulmonary tuberculosis (consumption) occurring in your practice be reported to this office, whereupon a circular of instructions will be sent to the family, or those in charge of such patients, with the object of lessening and preventing the spread of this dire complaint.

Whenever the diagnosis as to the existence of the disease is in doubt, you are most respectfully requested to submit to the bacteriologist of this department the sputum of such cases for a bacteriological test, which will be made free of charge. The report of this examination will be telephoned you.

Yours most respectfully,

CARL SCHILLING, M. D.,

A. J. KESSLER, M. D.,

J. E. MILLER, M. D.,

Board of Health.

INFORMATION

FOR

Consumptives and Those Living With Them.

TUBERCULOSIS, commonly known as consumption, decline, scrofula, white swelling, wasting disease, is a *contagious* disease, which means that every new case is contracted, "caught," from some other case. Consumption is not an inherited disease any more than are smallpox, diphtheria or scarlet fever, inherited diseases. The cause of consumption is a germ, and the disease is produced by this germ alone. This germ is found in the sputum (spit) of persons having consumption, and in the pus (matter) discharged from tubercular sores of all kinds.

The germ of consumption finds its way into the bodies of healthy persons in three ways:—

2. Through the lungs.
2. Through the stomach.
3. Through open wounds (sores).

I. THROUGH THE LUNGS.

This is apt to occur when an ordinary pocket handkerchief is used by a tuberculous (consumptive) person to spit

into—a filthy and dangerous habit. When such a handkerchief is opened the dried spit becomes pulverized and blown into the air, and may then be inhaled by healthy persons, or by the patient himself, who is likely to suffer from drawing the disease germs into portions of the lung previously healthy. Another most common source of dried pulverized spit is derived from the disgusting habit of spitting on the floors of street cars, churches, theatres, stores, public buildings, and on the sidewalks and ground. The spit becomes dry, mixes with the dust and is then carried into the air, and finally breathed into the lungs or swallowed. This spitting habit is *dangerous* and should not be practiced.

II. THROUGH THE STOMACH.

This occurs when consumptives swallow their own spit, and also, by the use of spoons, cups, knives and forks, etc., which have not been properly cleaned after having been used by consumptive people. Meat and milk from cattle having consumption are also a source of great danger, and should *never be used*.

III. THROTTGH OPEN WOUNDS (CUTS OR SORES).

This happens by persons getting consumptive pus (matter) into an open wound, and is probably the least common of the three usual ways of infection.

In the city of Fort Wayne one-fourth, or 25 out of every 100 deaths, are caused by consumption. The probabilities are that this death rate is not high enough, because often times the cause of death is not made known or is made falsely.

The means of preventing the spread of consumption rests mostly with persons having the disease. If they exercise proper precautions, which are not difficult nor exacting, they can avoid giving the disease to others, and yet not be deprived of the society of their friends nor of any of the comforts of life.

The Board of Public Health will insist upon persons having consumption taking the following precautions :

All sputum (spit) from consumptives should be destroyed and must not be allowed to become dry. A spitting cup or flask, containing just enough disinfecting solution (which can be made by adding thirty (30) drops of carbolic acid to a half cup of water, or by dissolving a tablet of bi-chloride of mercury, such as may be procured at any drug store, in a pint of water) to cover the bottom of the vessel should be used for expectoration (spit). When out of doors a consumptive should use a pocket spitting flask containing the carbolic acid or mercury solution. A wide-mouth bottle may be used for this purpose. If this is impossible, a piece of old cotton cloth or water-closet paper should be used to spit into, and such cloth or paper destroyed by fire as soon as possible after using. No piece should be used for more than one expectoration.

Never spit on the floors of street cars, public buildings, stores, etc., nor on the ground or sidewalks, as such sputum becomes dried, is blown about and furnishes the source of danger above referred to. There is little danger from the mere breath of a tubercular patient; the danger lies in the dry expectoration, which contains the germs of consumption.

Kissing consumptives is a positive source of infection, and should be guarded against, especially in the care of chil-

dren. Married people should not sleep together, where either is consumptive. Sleeping in rooms occupied by consumptive persons is a source of danger, and such rooms should not be used by other persons after having been occupied by consumptives, until they have been thoroughly disinfected and all material in them put through the same course. Rooms can practically be disinfected by the use of the fumes of burning sulphur (using 3 pounds of sulphur to a room 10 feet square, and increasing the amount according to the size of the room in proportions of 3 pounds to each additional 1,000 cubic feet of air space) the rooms during the time being tightly closed and allowed to remain for at least twenty-four hours. The wood work, walls, wooden parts of bedsteads, chairs, etc., should be washed with a solution of bi-chloride of mercury (the proportions of which as before stated). For bed springs, etc., a solution of carbolic acid should be used, as mercury will injure the metal.

All dishes, spoons, forks, etc., should be thoroughly washed in boiling water, after having been used by a consumptive, and such articles should not be used by any other persons in the household until they have been boiled. All meats should be thoroughly cooked and milk boiled if it is thought to be from a diseased source.

The bedding and clothing used by a consumptive should not be included in the family wash; such articles should be washed separately, and be thoroughly boiled during the process of cleansing.

A. J. KESLER, M. D.,
CARL SCHILLING, M. D.,
J. E. MILLER, M. D.,
Board of Health.

The circular of information for consumptives is very similar to that in use in Buffalo and is intended to be a guide to those afflicted in order that they do not infect relatives or friends. The introduction of this health measure was not well received by the physicians of the city, but is gradually gaining ground and must soon lead to the enforcement of more rigid laws for the prevention of the spread of this scourge.

The number of samples of sputum examined are given in the table below :

EXAMINATION OF SPUTUM.

	Tubercle Bacilli Present.	Negative.	Total.
October	14	18	32
November	12	14	26
December	22	26	48

The serum diagnosis of typhoid fever has been of practical benefit, and though only of brief existence, results thus far obtained seem to be reliable. The test depends upon a discovery by Pfeiffer, of Berlin, and Widal, of Paris, who found that the serum obtained from the blood of a typhoid fever patient is capable of so acting upon pure bouillon cultures of typhoid bacilli mixed with it as to abolish the active motion so characteristic of that organism in fluid culture media, and to cause agglutination of the individual bacilli in large groups or clumps. With the serum of healthy persons or those suffering from febrile diseases other than typhoid, the motion continues indefinitely when mixed with a typhoid culture. It has further been found that the blood need not be fluid, but when dried blood is moistened with a little water, if it be typhoid blood, it possesses the same property of inhibiting the motion of typhoid bacilli. For the purpose of taking specimens, a small piece of sterile mica is furnished ready to

receive one or more drops of blood. After allowing the blood to dry the mica is placed in an envelope and sent either by mail or messenger to the health laboratory.

The department wishes to obtain data upon the following points, and requests the medical profession to aid it by furnishing any information bearing upon them:

First—The proportion of cases in which a correct diagnosis can be made by the serum test when dried samples are used.

Second—The earliest period in typhoid fever at which it can be expected to give indications.

Third—The length of time for which it persists after convalescence.

Fourth—The existence of any relation between the intensity of the reaction of the test and the course of the disease.

Fifth—The study of the nature of the obscure febrile conditions, clinically termed gastric fever, continued fever, abortive typhoid, bilious fever, acute phthisis, etc., about which our present knowledge is very meagre and unsatisfactory.

WATER SUPPLY.

Chemical and bacteriological examination of the city water are made weekly throughout the year. The specimens are taken from the laboratory tap and at no time has the water been of bad quality. A reference to the mortality table will show few deaths from typhoid fever during the year and no higher compliment could be paid the system than that diseases commonly conveyed to the consumer in the water were few in number during the year. At times when the mains are heavily taxed, during fires and extremely hot weather when water is wasted by sprinkling, the water becomes cloudy and a sediment deposits on the sides and in the bottom of vessels. This is accumulation of vegetable and mineral matter deposited in

the mains and is not dangerous to health. Bacteria average in number from 80 to 300 per cc. Pathogenic bacteria have never been detected in the supply. The old well system is still a menace to health, and the vast majority of diseases due to bad water can be traced directly to these wells. Most of these private wells are old and so shallow that surface water alone, without filtration or dilution, is their contents. Believing that this water supply is bad, we have condemned all such wells upon the slightest evidence of surface or sewage contamination.

In the routine examination of water, color, odor, chlorine, ammonia free and albuminoid, nitrates and nitrites are looked for, and, when necessary, quantities estimated. Bacteria are developed by plate method, and the character of suspicious colonies is accurately determined.

The examinations for the year resulted as follows :

MILK SUPPLY.

The methods employed by the Health Board to prevent the sale of adulterated milk and to insure a good quality of good milk have undoubtedly resulted in raising the standard of the supply. The state law of Indiana provides a penalty for adulteration, but none for poor quality of milk. Many a time it is not possible to say that a specimen of milk is adulterated, though it may be of poor quality, hence the necessity of a milk ordinance fixing a standard of quality. Such an ordinance is now under consideration, which is in substance the same as those in force in other cities, making a standard of quality and fixing a penalty for violation of the same. In examinations made during the year the principal forms of adulteration in order of frequency were, the addition of water, removal of cream, both watering and skimming, and the addition of antiseptics and preservatives, which are added to milk for the purpose of increasing its keeping qualities. Coloring matters have never been detected.

The method of milk examination as made in the laboratory is the same as reported in the annual report of 1895. In the detection of antiseptics, boracic and borax, salicylic acid and the fluorides are carefully searched for. The lactoscope is used for the rapid estimation of fats. It depends on the principle that the more fat a milk contains, the more opaque it is, and the more water must be added to bring it to a certain degree of transparency. One can read this instrument within 0.25 per cent. of the actual percentage, and the personal error may be determined by comparison with analytical methods.

The greatest significance is given to the bacteria in milk. Milk, as it exists in the udder of a healthy cow, contains no

bacteria. On the other hand, the bacteriologic examination of the milk supply of the city shows a surprisingly large contamination with micro organisms—from 25,000 to 50,000 being found in a single cubic centimeter. Reasons why the city milk supply is not sterile are, dirty stables, dirty cows milked by dirty hands into dirty pails and delivered in unprotected wagons, thus exposing the product to the dust of the street and other filth. It is not necessary to present any argument to show the direct relation of unclean milk of poor quality and infant mortality. Large cities have demonstrated time after time that the purity of a milk supply directly controls the health of the infants and children; therefore, any measures to regulate this food supply are in accord with modern health measures.

During the investigations for the past year we have been unable to obtain samples from milk dealers keeping one or two cows within the city limits. These cows are usually slop-fed, and their product must be inferior. To reach this class of dealers a clause is introduced in our milk ordinance making it necessary for all milk dealers to register their names and addresses. That the distribution of milk from houses where contagious diseases exist is directly responsible for epidemics is a well-known fact, and, being in possession of the names and addresses of all dealers, the Board of Health may prohibit the sale of milk from such places.

Tuberculosis, a disease widespread among the inhabitants of this state, is also common to dairy cattle. The infant mortality from this disease is alarming, and statistics show that at least one-half of these deaths are due to the ingestion of milk containing the germs of consumption. We have a means to determine positively consumption in cattle, and while the

control of diseases of live stock is in the hands of the State Live Stock Commission, yet we should be vigilant in protecting our community from such diseases.

The appended table will show the result of the analysis of samples of milk taken at irregular intervals throughout the year.

Those above grade contain 3 per cent. or more of butter fat and 11 per cent. or more of total solids.

CLERK,

P. J. McDONALD.

ENGINEER,

THOMAS BAXTER.

INSPECTOR,

FRANK ITEN.

EIGHTEENTH ANNUAL REPORT
OF THE
TRUSTEES OF THE WATER WORKS,
FORT WAYNE, INDIANA.

To the Honorable Mayor and Common Chuncil:

GENTLEMEN—The Trustees of the Water Works respectfully submit for your consideration the eighteenth annual report of this department, for the year ending December 31, 1896. During the year nine miles of pipe were laid, giving us a total pipeage of 73.73 miles, as well as 615 hydrants for fire protection; 487 service connections were also made during the year, thus giving us 6,289 consumers. The Trustees decided that, with the pipe system nearly complete, and in consideration of the depressed condition of the times, a reduction in water rentals should be made, consequently a 10 per cent reduction was ordered and went into effect January 1, 1897. This makes our water rents lower than any in the country, as will be seen by a tabulated statement in the Clerk's report, compiled from reports of different cities.

The well system of the north side pumping station consists of 35 gravel and 13 rock wells. Heretofore the water has been pumped direct from the wells, but this year a large

inlet or receiving well was constructed at the pumping station and connected with the suction pipe of this system, so that water syphons into the well from which the pumps take it.

This is very beneficial to the machinery, as it avoids any trouble which might arise from an accumulation of air in the suction pipes, and as a consequence the machinery works smoothly and renders accident almost impossible. The eight-hour system has been adopted at the pumping stations and has proven a most satisfactory change, as heretofore the employes were required to be on duty for twelve hours each, which we believe was too long for prompt and efficient work.

When the completion of the reservoir was being discussed one of the minor advantages mentioned was the good to be derived by the people from the grounds adjacent to the reservoir.

This surely has surpassed all expectations, for the frozen lake has furnished healthful amusement to hundreds of skaters, while the peaceful water is no less enjoyable to the elder ones in the summer. The work of beautifying the surroundings is almost complete, and it will be but a short time until this is one of the prettiest places in the city.

For fuller particulars and details you are respectfully referred to the appended report of the Clerk.

Respectfully,

WILLIAM BITTLER,

EMMET H. McDONALD,

MURRAY HARTNETT,

Trustees of the Water Works.

Clerk's Report.

Water Pipe Laid in 1890.

- 338 feet of 6-inch pipe on Cass from First to Railroad crossing.
290 feet of 6-inch pipe on Broadway from DeWald to Creighton avenue.
1044 feet of 6-inch pipe on Harrison from Grand to Dawson street.
1321 feet of 6-inch pipe on DeWald from Calhoun to Lafayette street.
2192 feet of 8-inch pipe on Calhoun from DeWald to Leith.
391 feet of 6-inch pipe on Calhoun from Leith to Killea street.
319 feet of 6-inch pipe on Fairfield avenue from DeWald to Creighton avenue.
1310 feet of 6-inch pipe on Buchanan from Lafayette to Hanna street.
1155 feet of 6-inch pipe on Creighton avenue from Gay to Thomas street.
373 feet of 6-inch pipe on Thomas from Buchanan to Horace street.
467 feet of 6-inch pipe on Horace from Thomas to Holton avenue.
533 feet of 4-inch pipe on Hanna from Lewis to Madison street.
351 feet of 6-inch pipe on Wallace from Gay to Smith street.
730 feet of 6-inch pipe on Grant from Smith to Thomas street.
369 feet of 6-inch pipe on Thomas from Grant to Horace street.
1860 feet of 6-inch pipe on Smith from Wallace to Creighton avenue.
1517 feet of 6-inch pipe on Oliver from Creighton avenue to Grant street.
1200 feet of 6-inch pipe on John from Horace to Creighton avenue.
751 feet of 4-inch pipe on Clinton from DeWald to Williams street.
913 feet of 6-inch pipe on Butler from Clinton to Lafayette street.
391 feet of 4-inch on Suttentfield from Calhoun to Clinton street.
1286 feet of 8-inch pipe on Leith from Calhoun to Lafayette street.
1662 feet of 12-inch pipe on East Lewis from Ohio to Walton avenue.
381 feet of 6-inch pipe for hydrant branches in connection with the above extensions.
1108 feet of 6-inch pipe on Superior from Griffith to Van Buren street.
722 feet of 6-inch pipe on Van Buren from Superior to Main street.
40 feet of 6-inch pipe on Jackson from Pritchard to hydrant.
202 feet of 4-inch pipe from Jefferson north on Jackson.

148 feet of 4-inch pipe from Wilt north on Jackson.

400 feet of 4-inch pipe on Jackson to Chicago street.

720 feet of 4-inch pipe on Hough from Hanna to Clay street.

404 feet of 4-inch pipe on Montgomery from Lafayette to Barr street.

Location of Valves Set in 1890.

1 8-inch valve on southeast corner of Calhoun and Creighton avenue.

1 8-inch valve on northeast corner of Calhoun and Allen.

1 6-inch valve on southeast corner of Calhoun and Leith.

1 8-inch valve on southeast corner of Leith and Calhoun.

1 4-inch valve on southeast corner of Sutfenfield and Calhoun.

1 6-inch valve on uortheast corner of DeWald and Calhoun.

1 6-inch valve on northwest corner of Dewald and Lafayette.

1 4-inch valve on northwest corner of Clinton and DeWald.

1 4-inch valve on southwest corner of Clinton and Williams.

1 6-inch valve on northwest corner of Butler and Lafayette.

1 6-inch valve on southwest corner of Fairfield and DeWald.

1 6-inch valve on southeast corner of Broadway and DeWald.

1 6-inch valve on northwest corner of Harrison and Dawson.

1 6-inch valve on southwest corner of Harrison and Grand.

1 6-inch valve on northwest corner of Buchanan and Hanna.

1 6-inch valve on northwest corner of John and Creighton avenue.

1 6-inch valve on northwest corner of Smith and Creighton avenue.

1 6-inch valve on southwest corner of Smith and Buchanan.

1 6-inch valve on northwest corner of Smith and Buchanan.

1 6-inch valve on northwest corner of Oliver and Creighton avenue.

1 6-inch valve on southwest corner of Oliver and Buchanan.

1 6-inch valve on northwest corner of Oliver and Buchanan.

1 6-inch valve on southwest corner of Oliver and Grant.

1 6-inch valve on southeast corner of Horace and Thomas.

1 6-inch valve on northeast corner of Grant and Smith.

1 6-inch valve on southeast corner of Wallace and Gay.

1 6-inch valve on northwest corner corner of Thomas and Buchanan.

- 1 6-inch valve on southeast corner of Cass and First.
- 1 12-inch valve on northwest corner of Lewis and McCulloch.
- 1 12-inch valve on northwest corner of Lewis and Holton avenue.
- 1 6-inch valve on southwest corner of Superior and Griffith.
- 1 6-inch valve on southeast corner of Superior and Van Buren.
- 1 6-inch valve on southeast corner of Pritchard and Jackson.
- 1 4-inch valve on northwest corner of Jefferson and Jackson.
- 1 4-inch valve on northwest corner of Wilt and Jackson.
- 1 4-inch valve on northwest corner of Hanna and Hough.
- 1 4-inch valve on southwest corner of Lafayette and Montgomery.

Location of Hydrants Set in 1890.

MATTHEWS HYDRANTS.

- 1 on southeast corner of Superior and Fulton.
- 1 on Superior, between Fulton and Van Buren.
- 1 on southeast corner of Superior and Van Buren.
- 1 on southeast corner of Pritchard and Jackson.
- 1 on northeast corner of Cass and Railroad Crossing.
- 1 on northeast corner of Broadway and Creighton avenue.
- 1 on southwest corner of Harrison and Melita.
- 1 on southwest corner of Harrison and Highland.
- 1 on northeast corner of DeWald and Clinton.
- 1 on northeast corner of DeWald and Barr.
- 1 on southeast corner of Calhoun and Creighton ave.
- 1 on southeast corner of Calhoun and Taber.
- 1 on southeast corner of Calhoun and Suttentfield.
- 1 on southeast corner of Calhoun and Allen.
- 1 on southeast corner of Calhoun and Leith.
- 1 on northeast corner of Calhoun and Killea.
- 1 on northwest corner of Fairfield avenue and Creighton avenue.
- 1 on northwest corner of Buchanan and Warsaw.
- 1 on the northwest corner of Buchanan and Hanna.

- 1 on northwest corner of Creighton avenue and Smith.
- 1 on the northwest corner of Creighton avenue and Oliver.
- 1 on southwest corner of Thomas and Horace.
- 1 on southwest corner of Thomas and Grant.
- 1 on southwest corner of Horace and Holton avenue.
- 1 on southwest corner of Wallace and Smith.
- 1 on northwest corner of Grant and Oliver.
- 1 on northwest corner of Smith and Grant.
- 1 on northwest corner of Smith and Horace.
- 1 on southwest corner of Oliver and Horace.
- 1 on northwest corner of Oliver and Green.
- 1 on southeast corner of John and Buchanan.
- 1 on John, between Buchanan and Creighton avenue.
- 1 on northwest corner of John and Creighton avenue.
- 1 on northeast corner Butler and Clinton.
- 1 on northeast corner of Butler and Barr.
- 1 on southeast corner of Leith and Jane.
- 1 on southwest corner of Leith and Lafayette.
- 1 on northeast corner of Lewis and Cedar.
- 1 on southeast corner of Lewis and McCulloch.
- 1 on Lewis, between McCulloch and Lillie.
- 1 on northeast corner of Lewis and Lillie.
- 1 on northwest corner Lewis and Holton avenue.
- 1 on southeast corner of Jackson and Pritchard.
- 1 on southeast corner Superior and Fulton.
- 1 on Superior, between Fulton and Van Buren.
- 1 on southeast corner Superior and Van Buren.

Water Pipe Laid in 1891.

- 920 feet of 8-inch pipe on Huffman from St. Marys avenue to Sherman street.
- 458 feet of 6-inch pipe on Sherman from Huffman to Putnam street.

-
- 2167 feet of 6-inch pipe on Putnam from Sherman to Wells street.
973 feet of 6-inch pipe on Walnut from Fairfield avenue to Fox street.
745 feet of 6-inch pipe on Barr from Lewis to Holman street.
169 feet of 8-inch pipe on Walton avenue from Lewis street to Maumee avenue.
600 feet of 8-inch pipe on Maumee avenue from Walton avenue west.
872 feet of 6-inch pipe on Maumee avenue from Schick street east,
569 feet of 4-inch pipe on Harmer from Lewis to Madison street.
1315 feet of 6-inch pipe on East Creighton avenue from Lafayette to Hanna street.
312 feet of 8-inch pipe on Fairfield avenue from Lavina to Hendricks street.
863 feet of 6-inch pipe on Hendricks from Fairfield avenue to Broadway.
700 feet of 6-inch pipe on Cass from Fourth to Sixth street.
305 feet of 6-inch pipe on Sixth from Cass to Harrison street.
700 feet of 6-inch pipe on Harrison from Sixth to Fourth street.
347 feet of 12-inch pipe on Harrison from Fourth to Third street.
2551 feet of 12-inch pipe on Third from Harrison to Sherman street.
375 feet of 6-inch pipe on Cherry from Main to Boone street.
1810 feet of 6-inch pipe on Boone from Cherry to Watkins.
370 feet of 6-inch pipe on Watkins from Boone to Main street.
1412 feet of 8-inch pipe on Wall from Broadway to Metz street.
1140 feet of 6-inch pipe on Nirdlinger avenue from Broadway to Metz street.
780 feet of 4-inch pipe on Stophlet from Broadway to Metz street.
680 feet of 6-inch pipe on Taylor from Broadway to Metz street.
1120 feet of 6-inch pipe on Metz from Wells to Taylor street.
3940 feet of 6-inch pipe on West Creighton avenue from Calhoun to Broadway.
375 feet of 4-inch pipe on East Creighton avenue from Calhoun to Clinton street.
375 feet of 4-inch pipe on Tabor from Calhoun to Clinton street.
1160 feet of 6-inch pipe on Harrison from Creighton avenue to Allen street.
380 feet of 6-inch pipe on Allen from Harrison to Calhoun street.

- 425 feet of 6-inch pipe on Harrison from Dawson to Williams street.
- 360 feet of 4-inch pipe on Melita from Harrison to Webster street.
- 1000 feet of 6-inch pipe on Hanna from Tabor to Pontiac street.
- 1410 feet of 6-inch pipe on Force from East Creighton avenue to Pontiac street.
- 1410 feet of 6-inch pipe on John from East Creighton avenue to Pontiac street.
- 1410 feet of 6-inch pipe on Gay from East Creighton avenue to Pontiac street.
- 1425 feet of 6 inch pipe on Smith from East Creighton avenue to Pontiac street.
- 820 feet of 6-inch pipe on East Creighton avenue from Holton to Winter street.
- 665 feet of 8-inch pipe on East Creighton avenue from Winter to Walton avenue.
- 720 feet of 6-inch pipe on Francis from Lewis to Eliza street.
- 760 feet of 4-inch pipe on Hugh from Francis to Gay street.
- 2590 feet of 6-inch pipe on Eliza from Francis to McCulloch street.
- 375 feet of 6-inch pipe on McCulloch from Eliza to Hayden street.
- 710 feet of 6-inch pipe on Hayden from McCulloch to Lillie street.
- 1110 feet of 6-inch pipe on Lillie from Hayden to Lewis street.
- 330 feet of 6-inch pipe on Division from Madison to Jefferson street.
- 810 feet of 4-inch pipe on Oak from Division to Ohio.
- 360 feet of 4-inch pipe on Harmer from Eliza to Hugh street.
- 380 feet of 6-inch pipe on Francis from Wayne to Erie street.
- 446 feet of 6-inch pipe on High from Barthold street west.
- 2530 feet of 6-inch pipe on Erie from Francis to Hanover street.
- 380 feet of 6-inch pipe on Hanover from Erie to Wayne street.
- 2700 feet of 6-inch pipe on Wayne from Schick street to Glasgow avenue.
- 850 feet of 12-inch pipe on Third from Sherman street to St. Marys avenue.
- 1290 feet of 12-inch pipe on St. Marys avenue from Third to Huffman street.
- 30 feet of 8-inch pipe on Huffman street from hydrant west.

2150 feet of 8-inch pipe on Huffman from Sherman to Wells street.
280 feet of 12-inch pipe on Fourth from Harrison to Calhoun street.
200 feet of 8-inch pipe taken up and replaced with 12-inch pipe on
Fourth from Harrison to Calhoun street.

Location of Valves Set in 1891.

1 6-inch valve on northeast corner of Francis and Wayne.
1 6-inch valve on southeast corner of Erie and Francis.
1 6-inch valve on southwest corner of Erie and Coombs.
1 6-inch valve on southeast corner of Erie and Coombs.
1 6-inch valve on southeast corner of Erie and Hanover.
1 6-inch valve on northwest corner of Hanover and Wayne.
1 6-inch valve on southeast corner of Wayne and Schick.
1 6-inch valve on southwest corner of Wayne street and Walton
avenue.
1 6-inch valve on southeast corner of Wayne street and Walton
avenue.
1 6-inch valve on southwest corner of Wayne street and Glasgow
avenue.
1 4-inch valve on southeast corner of Oak and Division.
1 4-inch valve on southwest corner of Oak and Ohio.
1 6-inch valve on southwest corner of Francis and Lewis.
1 6-inch valve on northeast corner of Eliza and Francis.
1 6-inch valve on northwest corner of Eliza and Chute.
1 6-inch valve on northeast corner of Eliza and Chute.
1 6-inch valve on northwest corner of Eliza and McCulloch.
1 6-inch valve on northeast corner of McCulloch and Hayden.
1 6-inch valve on northeast corner of Hayden and McCulloch.
1 6-inch valve on northwest corner of Hayden and Lillie.
1 6-inch valve on northwest corner of Lillie and Hayden.
1 6-inch valve on southwest corner of Lillie and Lewis.
1 4-inch valve on northeast corner of Harmer and Eliza.
1 4-inch valve on northeast corner of Hugh and Francis.

- 1 6-inch valve on northwest corner of Hanna and Pontiac.
- 1 6-inch valve on southwest corner of Force street and Creighton avenue.
- 1 6-inch valve on northwest corner of Force and Pontiac.
- 1 6-inch valve on southwest corner of John street and Creighton avenue.
- 1 6-inch valve on northwest corner of John and Pontiac.
- 1 6-inch valve on southwest corner of Gay street and Creighton avenue.
- 1 6-inch valve on northwest corner of Gay and Pontiac.
- 1 6-inch valve on southwest corner of Smith street and Creighton avenue.
- 1 6-inch valve on northwest corner of Smith and Pontiac.
- 1 6-inch valve on southeast corner of Creighton and Holton avenues.
- 1 8-inch valve on southeast corner of Creighton avenue and Winter.
- 1 8-inch valve on southwest corner of Creighton avenue and Winter.
- 1 4-inch valve on southeast corner of Creighton avenue and Calhoun.
- 1 4-inch valve on southeast corner of Tabor and Calhoun.
- 1 6-inch valve on northwest corner of Creighton avenue and Calhoun.
- 1 6-inch valve on northeast corner of Creighton and Fairfie'd avenue.
- 1 6-inch valve on northwest corner of Creighton and Fairfield avenue.
- 1 6-inch valve on northeast corner of Creighton avenue and Broadway.
- 1 6-inch valve on northeast corner of Creighton avenue and Broadway.
- 1 6-inch valve on southeast corner of Harrison street and Creighton ave.
- 1 6-inch valve on northeast corner of Harrison and Allen.
- 1 6-inch valve on southwest corner of Allen and Calhoun.
- 1 6-inch valve on northwest corner of Harrison and Williams.
- 1 4-inch valve on southeast corner of Melita and Webster.
- 1 6-inch valve on southwest corner of Taylor street and Fairfield avenue.
- 1 6-inch valve on southeast corner of Fox and Taylor.
- 1 8 inch valve on southwest corner of Wall and Broadway.
- 1 8-inch valve on southeast corner of Wall and Metz.
- 1 6-inch valve on northwest corner of Metz and Taylor.
- 1 6-inch valve on southeast corner of Taylor and Metz.
- 1 6-inch valve on northwest corner of Taylor and Broadway.

-
- 1 4-inch valve on southwest corner of Stophlet and Broadway.
 - 1 4-inch valve on southeast corner of Stophlet and Metz.
 - 1 6-inch valve on southwest corner of Nirdlinger avenue and Broadway.
 - 1 6-inch valve on southeast corner of Nirdlinger avenue and Metz street.
 - 1 6-inch valve on Broadway, between Nirdlinger avenue and Wall street.
 - 1 6-inch valve on northeast corner of Cherry and Main.
 - 1 6-inch valve on southeast corner of Boone and Osage.
 - 1 6-inch valve on southwest corner of Boone and Osage.
 - 1 6-inch valve on northeast corner of Watkins and Main.
 - 1 6-inch valve on northwest corner of High and Barthold.
 - 1 12-inch valve on northeast corner of Third street and St. Mary's avenue.
 - 1 12-inch valve on northeast corner of St. Mary's avenue and Third street.
 - 1 12-inch valve on southeast corner of St. Mary's avenue and Huffman street.
 - 1 8-inch valve on northeast corner of Huffman and Sherman.
 - 1 8-inch valve on northwest corner of Huffman and Hensch.
 - 1 8-inch valve on northwest corner of Huffman and Wells.
 - 1 6-inch valve on northeast corner of Cass and Fourth.
 - 1 6-inch valve on northeast corner of Harrison and Fourth.
 - 1 12-inch valve on southeast corner of Harrison and Fourth.
 - 1 12-inch valve on northeast corner of Third and Wells.
 - 1 12-inch valve on northwest corner of Third and Wells.
 - 1 12-inch valve on northeast corner of Third and Barthold.
 - 1 8-inch valve on northwest corner of Huffman and Sherman.
 - 1 6-inch valve on northwest corner of Sherman and Huffman.
 - 1 6-inch valve on southeast corner of Putnam and Sherman.
 - 1 6-inch valve on southwest corner of Putnam and Wells.
 - 1 6-inch valve on northwest corner of Walnut street and Fairfield avenue.
 - 1 6-inch valve on southeast corner of Barr and Lewis.
 - 1 6-inch valve on northeast corner of Barr and Holman.
 - 1 8-inch valve on southwest corner of Maumee and Walton avenue.

- 1 6-inch valve on northeast corner of Maumee avenue and Schick street.
- 1 4-inch valve on southeast corner of Harmer and Madison.
- 1 4-inch valve on northeast corner of Harmer and Lewis.
- 1 6-inch valve on southeast corner of East Creighton avenue and Lafayette street.
- 1 6-inch valve on southwest corner of East Creighton and Hanna.
- 1 6-inch valve on northwest corner of Hendricks and Fairfield avenue.
- 1 6-inch valve on northeast corner of Hendricks and Short.

—
91 Valves set in 1891.

Location of Hydrants Set in 1891.

BOURBON HYDRANTS.

- 1 on southeast corner of Boone and Osage.
- 1 on northeast corner of Huffman and Koch.
- 1 on northeast corner of Huffman and Short.
- 1 on northeast corner of Huffman and Hensch.
- 1 on southeast corner of Huffman and Meridian.
- 1 on northeast corner of Huffman and Andrews.

- 1 6-inch on northwest corner of Canal and Liberty.
- 1 6-inch on northwest corner of Grant avenue and Randall.
- 1 6-inch on southeast corner of Grant avenue and Humphrey.
- 1 6-inch on southeast corner of Elm and Center.
- 1 6-inch on northeast corner of Cherry and Elm.
- 1 6-inch on northeast corner of Hayden and Chute.
- 1 6-inch on northeast corner of Hayden and Division.
- 1 6-inch on northeast corner of Hayden and Harmer.
- 1 6-inch on northeast corner of Hayden and Francis.
- 1 6-inch on southwest corner of Buchanan and Holton.
- 1 6-inch on southeast corner of Buchanan and Reed.
- 1 6-inch on Hayden between McCulloch and Ohio.
- 1 6-inch on northeast corner of Hayden and Ohio.
- 1 6-inch on Tabor between Lafayette and Warsaw.

- 1 6-inch on northeast corner of Tabor and Warsaw.
- 1 6-inch on northeast corner of Mechanic and Elm.
- 335 feet of 6-inch pipe for hydrant connections.

LUDLOW HYDRANT.

- 1 6-inch on west end of Walnut street.

Location of Valves Set in 1893.

- 1 6-inch valve on southeast corner of Mechanic and Main street.
- 1 4-inch valve on southeast corner of Elm and Mechanic street.
- 1 4-inch valve on southwest corner of Elm and Cherry street.
- 1 6-inch valve on southwest corner of Cherry and Main street.
- 1 6-inch valve on southeast corner of Nelson and Wilt street.
- 1 4-inch valve on northwest corner of Jones and College street.
- 1 4-inch valve on northeast corner of Jones and College street.
- 1 6-inch valve on southeast corner of College and Wilt street.
- 1 6-inch valve on northeast corner of College and Wall street.
- 1 4-inch valve on southwest corner of Jackson and Jefferson street.
- 1 4-inch valve on southwest corner of Jackson and Washington street.
- 1 6-inch valve on southwest corner of Oakley and Walnut street.
- 1 6-inch valve on northwest corner of Oakley and DeWald street.
- 1 4-inch valve on northeast corner of Poplar and Oakley street.
- 1 6-inch valve on southeast corner of Webster and Creighton avenue.
- 1 6-inch valve on southwest corner of Hoagland avenue and Butler street.
- 1 4-inch valve on northwest corner of Duryea and Hoagland avenue.
- 1 4-inch valve on northeast corner of Poplar and Fairfield avenue.
- 1 4-inch valve on northwest corner of Poplar and Fairfield avenue.
- 1 6-inch valve on northeast corner of Tabor and Lafayette street.
- 1 6-inch valve on southeast corner of Pontiac and Calhoun street.
- 1 4-inch valve on northeast corner of St. Martin and Lafayette street.
- 1 4-inch valve on northwest corner of St. Martin and Hanna street.
- 1 6-inch valve on northwest corner of Tabor and Hanna street.

- 1 6-inch valve on northwest corner of Hayden and McCulloch street.
 - 1 6-inch valve on northwest corner of Holton and East Creighton avenues.
 - 1 6-inch valve on southeast corner of Buchanan and Thomas street.
 - 1 6-inch valve on northeast corner of Hayden and Francis street.
 - 1 6-inch valve on northwest corner of Hayden and Chute street.
 - 1 6-inch valve on northeast corner of Hayden and Chute street.
 - 1 6-inch valve on southwest corner of Summit and McCulloch street.
 - 1 6-inch valve on southeast corner of Summit and Ohio street.
 - 1 4-inch valve on northeast corner of Greeley and Van Buren street.
 - 1 4 inch valve on southwest corner of Greeley and Fulton street.
 - 1 6-inch valve on southwest corner of Fulton and Superior street.
 - 1 6-inch valve on northwest corner of Huffman and St. Mary's avenue.
 - 1 6-inch valve on southwest corner of Michigan avenue and Broadway.
 - 1 8-inch valve on northeast corner of Harrison and Columbia.
 - 1 6 inch valve on southeast corner of Columbia and Calhoun street.
 - 1 6-inch valve on northeast corner of Calhoun and Columbia street.
 - 1 3-inch valve on southeast corner of Monroe and Lewis street.
 - 1 3-inch valve on southeast corner of Monroe and Madison street.
 - 1 6 inch valve on northwest corner of Reed and Creighton avenue.
 - 1 6-inch valve on southwest corner of Reed and Buchanan street.
 - 1 6-inch valve on southeast corner of Metz and Taylor street.
 - 1 6 inch valve on southwest corner of Pontiac and Lafayette street.
 - 1 6-inch valve on northeast corner of McCulloch and Lewis street.
-

Pipe Laid in the Winter of 1894.

- 3722 feet of 8-inch pipe on Columbia avenue, from Lafayette to Tecumseh street.
- 219 feet of 6-inch pipe on Wells, from Putnam street to Archer avenue.
- 1312 feet of 6-inch pipe on Archer avenue, from Wells to Meridian streets.
- 350 feet of 6-inch pipe on Meridian, from Archer avenue to Putnam street.

-
- 1400 feet of 6-inch pipe on Fourth, from Wells to Barthold street.
352 feet of 6-inch pipe on Barthold, from Fourth to Third streets.
1362 feet of 6-inch pipe on High, from 54 feet west of Wefel to Franklin avenue.
1580 feet of 12-inch pipe on St. Mary's avenue, from Third to Burgess streets.
190 feet of 8-inch pipe on St Mary's avenue, from Burgess street to Nickel Plate railroad.
1315 feet of 6-inch pipe on Suttentfield, from Lafayette to Hanna streets.
1050 feet of 6-inch pipe on Green, from Thomas to Winter streets.
1100 feet of 6-inch pipe on Gay, from Pontiac to Tenth streets.
950 feet of 16 inch pipe on Lafayette, from Tabor to Pontiac streets.
354 feet of 8 inch pipe on Lafayette, from Pontiac to Leith streets.
2850 feet of 16-inch pipe on Pontiac, from Lafayette to Smith streets.
375 feet of 4-inch pipe on Walter, from Maumee Road to Washington street.
330 feet of 6-inch pipe on Taylor, from Metz to Engle streets.
125 feet of 6-inch pipe on Pearl, from in front of Troy Laundry to Ewing.
193 feet of 6-inch pipe on West Washington, from Gardner street to Fair Ground.
47 feet of 6-inch pipe on Gardner, from south side of Washington street north to property line and plugged.

- 1 on southeast corner of Garden and Swinney.

-
- 1 on southeast corner of Garden and Stophlet.
 - 1 on southwest corner of Rockhill and Prichard.
 - 1 on southeast corner of Masterson and Barr.
 - 1 on southeast corner of Masterson and Clinton.
 - 1 on southeast corner of Hamilton and Barr.
 - 1 on southeast corner of Hamilton and Clinton.
 - 1 on southwest corner of Kansas and Grand.
 - 1 on northwest corner of Hoagland and Leith.
 - 1 on southeast corner of Leith and Webster.
 - 1 on southeast corner of Leith and Harrison.
 - 1 on southeast corner of Sutterfield and Barr.
 - 1 on southeast corner of Creighton avenue and Barr.
 - 1 on northeast corner of Grace and McLaughlin.
 - 1 on northeast corner of Grace and Jane.
 - 1 on northeast corner of Killea and Harrison.
 - 1 on northwest corner of Killea and Webster.
 - 1 on Holton between Fisher and Maud.
 - 1 between Jenison and Pontiac.
 - 1 on Winter between Pontiac and Jenison.
 - 1 on southwest corner of Lillie and Milan.
 - 1 on Lillie between Pontiac and Milan.
 - 1 on Winch between Pennsylvania and Wabash railroads.
 - 1 on northwest corner of Winch and Wabash railroad.
 - 1 on southwest corner of Winter and Eliza.
 - 1 on northwest corner of Oliver and Thomasetta.
 - 1 on northwest corner of Oliver and Emily.
 - 1 on Glasgow avenue between Humphrey and Randall.
 - 1 on northwest corner of Glasgow and Maumee avenues.
 - 1 on northwest corner of Wabash and Randall.
 - 1 on northwest corner of Wabash and Humphrey.
 - 1 on southwest corner of Maumee avenue and Alliger.
 - 1 on southwest corner of Winch and Penn.
 - 1 on northeast corner of Cottage and Indiana.

Valves Set in 1896.

- 1 4-inch valve on southwest corner of Maud and Holton.
- 1 4-inch valve on southeast corner of Julia and Thomas.
- 1 4-inch valve on southwest corner of Julia and Holton.
- 1 6-inch valve on northwest corner of Winter street and Creighton avenue.
- 1 6-inch valve on southeast corner of Winter and Edgerton.
- 1 4-inch valve on southwest corner of Holton and Buchanan.
- 1 6-inch valve on northwest corner of Holton and Buchanan.
- 1 6-inch valve on northwest corner of Winter and Hayden.
- 1 6-inch valve on northeast corner Eliza and McCulloch.
- 1 8-inch valve on southeast corner of Maumee and Walton.
- 1 6-inch valve on southeast corner of Maumee and Alliger.
- 1 6-inch valve on southwest corner of Maumee and Alliger.
- 1 6-inch valve on southwest corner of Winch and Penn.
- 1 6-inch valve on northeast corner of Grant and Maumee.
- 1 6-inch valve on southeast corner of Grant and Washington.
- 1 6-inch valve on southwest corner of Wabash and Washington.
- 1 6-inch valve on northwest corner of Wabash and Maumee.
- 1 6-inch valve on northwest corner of Glasgow and Maumee.
- 1 6-inch valve on southwest corner of Glasgow and Washington.
- 1 12-inch valve on northeast corner of Lake and Columbia avenue.
- 1 12-inch valve on southeast corner of Lake and St. Joe Boulevard.
- 1 12-inch valve on southwest corner of Lake and Dearborn.
- 1 12-inch valve on southwest corner of Lake and Crescent.
- 1 12-inch valve on southwest corner of Superior and Griffith.
- 1 12-inch valve on southwest corner of Superior and Webster.
- 1 3-inch valve on northeast corner of Guthrie and Metz.
- 1 6-inch valve on northwest corner of Guthrie and Metz.
- 1 6-inch valve on northeast corner of First and Cass.
- 1 6-inch valve on southwest corner of Harrison and Third.
- 1 4-inch valve on southwest corner of Harrison and Second.
- 1 4-inch valve on southeast corner of Cass and Second.

-
- 1 6-inch valve on northwest corner of Wells and Second.
 - 1 6-inch valve on northwest corner of Marion and High.
 - 1 6-inch valve on southwest corner of Marion and Third.
 - 1 6-inch valve on northwest corner of Clark and Wells.
 - 1 4-inch valve on northwest corner of Barthold and High.
 - 1 4-inch valve on southwest corner of Barthold and Third.
 - 1 6-inch valve on southwest corner of Main and Cherry.
 - 1 6-inch valve on southeast corner of Main and Lake Erie & Western railway.
 - 1 6-inch valve on northwest corner of Main and Runion.
 - 1 6-inch valve on northeast corner of Morrison and Runion.
 - 1 6-inch valve on northeast corner of Cleveland and Park.
 - 1 4-inch valve on southwest corner of Berry and College.
 - 1 4-inch valve on southeast corner of Rockhill and Wells.
 - 1 4-inch valve on northwest corner of Rockhill and Chicago.
 - 1 4-inch valve on northwest corner of Rockhill and Jones.
 - 1 4-inch valve on northeast corner of Van Buren and Pritchard.
 - 1 4-inch valve on southeast corner of Van Buren and Wells.
 - 1 6-inch valve on northeast corner of Garden and Wall.
 - 1 6-inch valve on northeast corner of Garden and Taylor.
 - 1 4-inch valve on southeast corner of Garden and Stophlet.
 - 1 4-inch valve on southeast corner of Garden and Nirdlinger.
 - 1 6-inch valve on northeast corner of Miner and Walnut.
 - 1 6-inch valve on northeast corner of Miner and DeWald.
 - 1 6-inch valve on northeast corner of Thompson and Scott.
 - 1 6-inch valve on southwest corner of Leith and Calhoun.
 - 1 6-inch valve on northwest corner of Killea and Calhoun.
 - 1 6-inch valve on northeast corner of Killea and Hoagland.
 - 1 6-inch valve on southwest corner of Pontiac and Hoagland.
 - 1 6-inch valve on northeast corner of Grace and Calhoun.
 - 1 6-inch valve on northwest corner of Grace and Lafayette.
 - 1 4-inch valve on northwest corner of Grace and Jane.
 - 1 4-inch valve on southwest corner of Leith and Jane.
 - 1 4-inch valve on southwest corner of Leith and McLachlan.
 - 1 6-inch valve on northwest corner of Sutenfield and Lafayette.
 - 1 6-inch valve on southeast corner of Sutenfield and Clinton.

- 1 6-inch valve on southwest corner of Creighton avenue and Lafayette.
- 1 6-inch valve on southwest corner of Masterson and Lafayette.
- 1 6-inch valve on southeast corner of Masterson and Calhoun.
- 1 6-inch valve on southeast corner of Hamilton and Calhoun.
- 1 6-inch valve on southwest corner of Hamilton and Lafayette.
- 1 6-inch valve on southwest corner of Force and Pontiac.
- 1 6-inch valve on southwest corner of Oliver and Creighton avenue.
- 1 6-inch valve on southeast corner of Reed and Creighton avenue.
- 1 6-inch valve on southeast corner of Winter and Creighton avenue.
- 1 6-inch valve on southeast corner of Lillie and Creighton avenue.
- 1 4-inch valve on southeast corner of Fisher and Thomas.
- 1 4-inch valve on southwest corner of Fisher and Holton.
- 1 4-inch valve on southeast corner of Maud and Thomas.

BY HON. JOHN S. IRWIN.

DEPARTMENT OF EDUCATION }
OFFICE OF SUPERINTENDENT OF PUBLIC }
SCHOOLS, April 1, 1897. }

*To the Honorable Henry P. Scherer, Mayor, and Members of
the Common Council of Fort Wayne, Ind.:*

GENTLEMEN:—Under the original Constitution of Indiana, no attempt whatever was made towards the opening of a Public School. But efforts, more or less successful, had been made by churches and private individuals to provide for the education of the children then living in the town. It is known that at a very early day a school was established by the Society of Friends somewhere in that portion of what was then part of Randolph county, but which is now Allen county; but no records or reminiscences whatever concerning the school can now be found.

In 1821, the Rev. Isaac McCoy was sent by the Baptist Church as a missionary and teacher to the Indians, opening a school for these wards in the old fort; he also received the

children of such white parents as were sent to him. In this school he was assisted at various times by Matthew Montgomery, Hugh B. McKean, and Mr. and Mrs. Votts. After leaving Mr. McCoy, Mr. and Mrs. Votts taught school in a house on the banks of St. Mary's river near the present site of the Gas Works office.

In 1825, after the organization of the county, the first school house of Fort Wayne was built on a lot adjoining the old grave yard, in the rear of the present jail, and was known as the County Seminary. In this building for many years, under the old ideas so admirably and tersely put by "Pete Jones," the young of the town, male and female, were taught by Mr. John I. Hedges, and his successor in office. About the same time Mr. Henry Cooper, father of a present member of the School Board and afterwards well known as a lawyer, taught in an upper room of an old log house on the southwest corner of the public square. The barred windows of this primitive school house must have served to depress the spirits of the scholars in the bright spring weather, while the rough floor and seats could have had little resemblance to the comfortable and even elegant appliances now provided for the pupil.

Mr. Aughinbaugh, after teaching in the old Masonic Hall of that day, had charge of the Seminary in 1832-3, being followed in 1834 by Smallwood Noel, who died many years later an honored and respected old man. He was followed in the next year by Mr. James Requa. About the same time Mr. Beggs taught in a small building on Columbia street.

In 1835-6, Mr. Myron F. Barbour, a most popular and successful teacher, who is still living (and in his 86 year,) in the enjoyment of a well earned and dignified ease and

comfort, had charge of the Seminary where he laid the foundation of a solid and practical education to the benefit of many of the best business men and citizens of the town. He was followed by Mr. John C. Sivey, afterwards well known as a civil engineer on the Wabash and Erie Canal, who later become a resident of Wabash. In years gone by an anecdote was well known concerning an applicant for the position of teacher in the Seminary, of whose moral qualifications the examiners entertained some suspicions. Want of moral character being apparently no ground of action they endeavored to defeat him by a strict and thorough examination in the essentials. In less than an hour the examination resulted in the entire defeat of the Board, and the licensing of the applicant.

In the spring of 1836, Miss Mann, now the honored wife of ex-Secretary of the Treasury McCulloch, and the mother of Charles McCulloch, president of the Hamilton National Bank, and Miss Hubbell, the late Mrs. Regal Taylor, came from the east and opened a school of very high and distinguished character in a room in the old court house; after teaching there for a short time they joined the Rev. Jesse Hoover, who, on August 2nd of that year, had opened a school in the basement of the Presbyterian church, the first and then the only church in town, which stood on the site of the present residence of Col. D. N. and Mr. Samuel Foster. In the charge of this school Mr. Hoover was succeeded by the Rev. W. W. Stevens, with Alexander McJunkin, as assistant. Mr. Stevens subsequently built a schoolhouse on West Berry street, where with his wife, he taught for many years.

Probably no teacher in Fort Wayne, certainly none of the older ones, has so impressed himself and his characteristics

upon the memories and respect of his pupils as did Alexander McJunkin. After leaving Mr. Stevens, he built a house, still standing, on the east line of Lafayette street, between Berry and Wayne streets, where he most successfully taught school for many years, until in 1852 he became the treasurer of the Fort Wayne and Chicago Railroad Company. A fine scholar, a strong, judicious, instructor, and a stern, rigidly strict disciplinarian, he most forcibly impressed his ideas and teachings upon the minds of his scholars, and not infrequently with equal force upon their bodies.

In the fall of 1845 the Presbyterian church opened a Ladies' Seminary under the Charge of Mrs. Lydia Sykes, which promised great usefulness, but after a year and a half of very successful work, Mrs. Sykes' health failed, and she was succeeded by the Rev. Mr. James, who had come to the town in 1846, and taught in several different buildings. Many other small private schools were taught in Fort Wayne, with varying success, by residents of the town, one of whom was the present Mrs. Barbara Renan.

In 1849 the Methodist College, afterwards the Fort Wayne College, and still later the Taylor University, situated at the west end of Wayne street was opened for higher education under the charge of Prof. A. C. McG. Huestis, who passed from life only a few years since. Mr. Huestis was possessed of marked ability and great originalty as a teacher and educator, and it is impossible fully to estimate the good seeds that were sown by his labors, or the fruits that have grown from them. The institution, with a life of varied success and depression under its different heads and management, has finally passed away.

In August, 1853, the Presbyterian Academy was reopened

on the site of the present High School, under the charge of Mr. Henry McCormick, with Jacob Lancers, as assistant. The school was continued under different teachers with varying success until 1867, when it was abandoned, as the public schools were more economically carrying out its objects, and the lots sold to the Board of School Trustees. Large and well organized parochial schools had also from time to time been opened under the care and direction of the Roman Catholic, the Lutheran, and other churches, many of which are still existing, well managed, well appointed, and successful in teaching their pupils the fundamental elements of religion, as held by the respective churches, in connection with the more secular subjects of education. So extensively are these parochial schools patronized by those connected with their respective religious bodies, and so high is the character of the work done therein, that in connection with the private and public schools, no excuse whatever can exist for an ignorant child or an illiterate adult.

In closing this part of the report, it is but proper to refer to another institution of learning in the city, whose origin is of a later date but whose character is worthy of especial commendation and praise.

In 1883 Miss Carrie B. Sharp and Mrs. Delphine B. Wells, two of the strongest and best qualified principals of the public schools, strongly impressed with the growing necessity for such a school, opened the Westminster Seminary, for the higher education of young ladies, not only of the city, but of the surrounding towns. This institution has had a growing career of usefulness and success which the writer earnestly hopes may increase and continue till the present principals

and their successors and their pupils, for many generations, have gone to their higher rewards.

Of Virginia in 1671 it was said that "the almost general want of schools for their children was of most sad consideration, most of all bewailed of the parents." "Every man," said Sir William Berkley in his report to the home government, "instructs his children according to his ability. The ministers should pray more and preach less. But I thank God there are no free schools nor printing, and I hope we shall not have these hundred years; for learning has brought disobedience and heresy and sects into the world, and printing has divulged them and libels against the best government. God keep us from both." Most loyal follower of Jack Cade who tells Lord Say, "Thou hast most traitorously corrupted the youth of the realm in erecting a grammer school; and whereas before our forefathers had no other books but the score and the tally, thou hast caused printing to be used; and contrary to the king, his crown, and dignity, thou hast built a paper mill." Under this same wise Governor Berkley, on reference of the subject to the king, a printing press was destroyed, and public education, and printing all news or books forbidden. Yet when the same Virginia, in connection with other states, ceded to the general government her territory north-west of the Ohio river, the congress of the confederation, in accordance with the spirit of the deed of session, declared in article 3 of the celebrated Ordinance of 1787, enacted for the perpetual government of the ceded lands, "Religion, morality, and knowledge being necessary to good government, and the happiness of mankind, schools and the means of education shall forever be encouraged." And Washington in his farewell address, said, "Promote, then, as an object of primary importance, institutions

for the general diffusion of knowledge. In proportion as the structure of a government gives force to public opinion, it is essential that public opinion should be enlightened."

Guided by these wise and judicious views, the framers of the first constitution of Indiana, in 1816, adopted as a fundamental principle the following, which was confirmed by the people, "Knowledge and learning generally diffused through a community being essential to the preservation of a free government, and spreading the opportunities and advantages of education through the various parts of the country being highly conducive to this end," it shall be the duty of the general assembly "to provide by law for a general system of education ascending in a regular gradation from township schools to a state university, wherein tuition shall be gratis, and equally open to all." The language of the revised constitution of 1851 differs slightly from this, but recognizing fully the principles of the ordinance of 1787, is essentially of the same import. It makes it the duty of the general assembly to "encourage by all suitable means, moral, intellectual, scientific and agricultural improvement; and to provide by law for a general and uniform system of common schools wherein tuitions shall be without charge, and equally open to all."

In article 8, section 2, it declares that "The common school fund shall consist of the congressional township fund, and the lands belonging thereto; the surplus revenue fund; the saline fund and the lands belonging thereto; the bank tax fund, and the fund arising from the one hundred and fourteenth section of the charter of the state bank of Indiana; the fund to be derived from the sale of county seminaries, and the money's and properties heretofore held for such seminaries; from the fines assessed for breaches of the penal laws of the state; and

from all forfeitures which may accure; all lands and other estate which shall escheat to the state for want of heirs or kindred entitled to inheritance; all lands that have been, or may hereafter be, granted to the state, where no special purpose is expressed in the grant, and the proceeds of the sale thereof; including the proceeds of the sales of swamp lands, granted to the state of Indiana by the act of congress of the 28th of Septemeber, 1850, after deducting the expense of selecting and draining the same; taxes on the property of corporations, that may be assessed by the general assembly for common school purposes."

Section 3, declares that, "The principal of the common school fund shall remain a perpetual fund, which may be increased, but shall never be diminished; and the income thereof shall be inviolably appropriated to the support of common schools, and to no other purpose whatever."

In the enabling act, authorizing the state of Indiana, congress, to insure the carrying out of the directions of the ordinance of 1787, provided that section sixteen in every township should be granted to such township for the use of schools, and also provided that two whole townships should be appropriated to the use of a seminary of learning.

Under the original constitution of 1816, no effort whatever was made, in what afterwards became Allen county, towards the opening of any public school.

Under the school law of 1852, passed by the general assembly to give force to the provisions of the revised constitution of 1851, Hugh McCulloch, Charles Case and William Stewart were, in 1853, appointed the first board of school trustees, to organize and manage the public schools of Fort Wayne. They found themselves in charge of the school af-

fairs of a city of some 5,000 persons, of whom about 1,200 were of school age, no school building, no school appliances whatever, and not a dollar with which to buy them. They rented the McJunkin schoolhouse on Lafayette street, appointing Mr. Isaac Mahurin, and his sister, Miss M. L. Mahurin, to teach therein; and a small house on the site of Mr. Henry Paul's present residence on West Wayne street, belonging to Mr. A. M. Hulburd, who, with his wife, was engaged to teach in it. Both schools were opened in September of that year, with a tuition fund for their support of \$330.72, and no special fund whatever. To acquire the funds necessary to continue the schools, the trustees, as provided by law, called a public meeting to vote upon levying a tax for that purpose. The purpose of the meeting failed ignominiously, and the trustees resigned. James Humphrey, Henry Sharp and Charles G. French were appointed their successors, and these gentlemen under a modified law, assessed a tax of two mills on the dollar for school purposes.

With the growth of the city the necessity for additional school accommodations grew rapidly, but the means under control of the trustees kept no corresponding pace. In 1855, Mr. Henry Sharp resigned, and was succeeded by Mr. Williams Smith. The Board determined to do all in their power for the relief of the pressing needs, purchased the site of the Clay school from Judge Samuel Hanna, and that of the Jefferson school from Dr. Charles E. Sturgis, and advertised for proposals to build the Clay school. They met and adjourned from time to time, but no bids having been received, with wonderful moral courage they assumed a responsibility the extent and weight of which cannot now be readily appreciated. They proceeded with the work themselves, letting it in portions as

they found opportunity and persons willing to assume the risk. After overcoming many and great difficulties, and in the face of innumerable discouragements they opened the building on February 9, with appropriate exercises, having appointed the Rev. George A. Irvin, superintendent. Those and those only, who have themselves experienced such trials and difficulties can fully appreciate the gratified feelings with which they beheld the completion of their arduous but valuable labors.

In September of the year ten gentlemen of the city generously mortgaged their personal reality to the State Sinking Fund for \$500.00 each, sending the full amount to the trustees who agreed to protect the mortgages and pay the interest as it become due, with this money the Board built the Jefferson school, furnishing, with the Cay school, accommodations for about 600 pupils. With the heavy debt hanging over them the trustees could do nothing further, although the number of children entitled to school privileges was constantly increasing.

In 1861 the Supreme Court decided the school law then existing unconstitutional, and the schools were closed for a short time. A new law was passed, but under circumstances so depressing and disheartening that the membership of the School Board was being constantly changed by resignation and appointment. In June, 1863, the Rev. George A. Irvin resigned his position as superintendent to become a chaplain in the Federal army, and was succeeded by Mr. E. S. Green, under whose administration a reorganization of the school, and the course of study was attempted, but owing to the great difficulties in the way, without much success.

Early in 1865 the school law was materially and advantageously amended, and the city councils were empowered to elect boards of school trustees, three in number, to serve for

three years each. In April of that year the Fort Wayne Council elected Oliver P. Morgan, Edward Slocum and John S. Irwin, trustees, who entered at once upon the duties of their office. In the following June they graduated the first class who had passed through the high school, consisting of four young ladies of very marked ability, two of whom are still teaching successfully in the schools which had educated them. At the close of the school year in June, Mr. Green resigned his position as superintendent.

The new School Board found the schools were totally inadequate, no accommodations, no school appliances or aids whatever, themselves the inheritors of a magnificent debt, and not a dollar of money. They had, however, a keen appreciation of the importance of their work, and great faith in the eventual recognition of that importance by the community. They elected Mr. James H. Smart, now Dr. Smart, president of Purdue University, as superintendent. With a high reputation for teaching ability acquired in the Tolêdo schools, and strong power of organization, he entered at once upon the accurate and practical grading of the schools, bringing the work within a reasonable number of years, and elevating the standard to the highest practicable level. From this time the growth of the schools, in numbers and popularity, was rapid and steady.

In 1866 the Board purchased part of the present site of the Hoagland school, and built thereon a plain one-story frame building of three rooms, seating when closely filled some 200 pupils. For both site and building they issued their warrants, which was all they could do. Two rooms were opened in September, but it soon became necessary to open the third. This building has, at various times, been enlarged and modified so that now it contains thirteen class rooms, all full. The

growth of the population in that part of the city, and the condition of the building itself, the small size and comparatively inconvenient character of the rooms, must in the near future, make the erection of a new and improved building a positive necessity.

In 1867 the Board purchased the sites of the present High, Hanna and Washington schools, and petitioned the City Council to issue bonds for the payment of these sites, and the erection of the necessary buildings thereon, which petition was granted and the bonds issued.

They immediately contracted with Messrs. Cochrane, Humphrey & Co. for the erection of the High and the Washington schools. Both buildings were furnished and opened for occupancy September 7th of that year. In the year 1877 a large addition was made to the High School building, and the older part greatly modified. In 1894 still further modifications were made in it to meet the rapidly growing demand for additional space. Notwithstanding all this the rapid growth of the classes promoted from the Grammar schools will demand greatly increased accommodations which must be met in the very near future.

The Washington school was also opened in September, 1868, and was originally a four-room building. In the year 1877 its internal arrangements were entirely reconstructed changing it to an eight-room building. In 1884, so rapidly had become the growth of the western part of the city, it became necessary to make an addition of four rooms, increasing the accommodations to twelve rooms in all, and all required.

In 1869 the Hanna school, a four-room building of the same plan as the Washington School, was built and one room occupied. In 1877 it was also transformed into an eight-room

building, and in 1882, to meet the rapid growth in that part of the city, four more rooms were added, all now in use.

In 1870, the small frame building which has stood upon the site of the High School, and had been moved to lots on the northwest corner of Jefferson and Harmer streets bought from Mr. Horace Hanna, was opened as the Harmer School with one teacher. In the next year two rooms were added and occupied. But the demands for more room grew so rapidly that in 1876 the buildings were sold and removed, and an eight-room brick building erected on the site. In 1893 it became necessary to build a four-room addition, making the whole a twelve-room house.

In 1871, the villages of Bowserville and Bloomingdale were added to the city, and the school in the one-room frame building opened in September. The next year it became necessary to add two rooms to the building, and 1875 the Board was compelled to buy an additional lot, sell the frame building, and erect a large and substantial eight-room brick, to which, in 1884, a four-room addition was made, all in use.

In 1874, small districts were added to the city on the north, east and south, each having a small school building which the Board immediately occupied. They also rented another small frame building on the north for a German school. These districts, with the exception of that on the north, have since been returned to the respective townships to which they formerly belonged.

But all these improvements and additions very soon proved inadequate to the rapid growth of the school population, and in 1886 the Board was compelled to purchase sites for buildings on the corner of Boone and Fry streets in the west, on the corner of Creighton and Holton avenues on the south-east

and on the corner of West DeWald and Miner streets on the south, and erected thereon the Nebraska, and the Holton Avenue schools, each two-room brick buildings, and the Miner Street school, a four-room brick. The construction of these buildings was such that they could be enlarged, and receive second stories, without the destruction of the roofs, and at comparatively small cost.

In 1888, to relieve the wants of the extreme eastern portion of the city, the Board purchased handsome lots from Judge McCulloch, on the corner of McCulloch and Eliza streets and erected thereon a substantial four-room brick, opening two rooms in January, 1889. All the rooms are now full.

In 1891 the overcrowded condition of the Hoagland and Bloomingdale schools compelled the Board to purchase sites on the corner of Clinton and Pontiac streets, on which they built the Hamilton School, a four-room brick; and on the corner of Franklin avenue and Huffman street, on which they built the Franklin School, similar to the Hamilton School. The Hamilton School is all occupied, and only one room of the Franklin unoccupied.

In 1891, two rooms were added to the Holton Avenue School, making it a four-room building, which is already overcrowded.

In 1893 the Nebraska School was also enlarged by two additional rooms, and all four are filled, even beyond a healthy point. At the same time a second story was put upon the Miner Street school, making it an eight-room building, all the rooms being now full.

In February, 1894, the Clay School, the first house built for the city schools, was destroyed by fire. On the same site the Board have erected a twelve-room brick building, which

we regard in its construction, arrangements and appliances, as a truly model building, and one erected at an exceptionally low cost, when its full character is considered. All the rooms are fully occupied.

Fully recognizing the fact that the character of the school depends very largely upon the character of the teachers, in 1867 Mr. Smart, under the direction of the Board, established a training school for the proper education of teachers. As a rule, graduation from the High School was a necessary precedent to admission to the school. Thorough education in pedagogical principles and methods, and accurate practice in the school room, under strong, well-qualified teachers, was the work of this school. The wisdom of the measure was rapidly manifested in the higher ability of the teachers, the broader, more accurate and more solid character of their work, and in the rapidly growing reputation of the schools amongst prominent educators. In 1877 the instruction in this school was limited to the primary grades, another being opened for instruction in the higher grades. This latter school was continued for two years only, and the former until June, 1886, when, for pressing reasons then existing, the Board discontinued it for the time being. So great were the advantages of the school in many ways that its reorganization is greatly to be desired.

Having been elected State Superintendent of Public Instruction in October, 1874, Mr. Smart resigned his position as Superintendent of the city schools in the early part of March, 1875, and was succeeded by John S. Irwin, who had for ten years been a member of the Board of Trustees.

The growth, prosperity and character of the schools have been largely influenced by the skill and labor of Mr. Smart.

Elected when a man young for the position, he brought to the work abilities of a high order, energy and perseverance that knew no tiring or defeat, knowledge of his profession, theoretical and practical, much beyond his years, and out of virtual chaos elaborated a system well arranged, with courses of study well adapted to the wants of the community, and productive of results valuable to the pupils, serviceable to the city and honorable alike to the Superintendent and teachers.

In 1877 the "colored question," which had caused much anxiety and trouble, and serious expense, was satisfactorily settled by placing the colored children in the regular schools, grades and districts for which their advancement fitted them, and they are now to be found doing satisfactory work in every grade from the baby room to the High school.

In March, 1878, certain movements in the legislature, unfriendly to High school interests, caused the Board to change the name of "High School" to that of "Central Grammar School." The old name, while neither being objectionable in itself nor giving additional strength to the schools, at that time excited useless but very unpleasant opposition. The change of name without any lowering of the standard of education, caused a closer and more sensible examination of the subject, and it being found, that in the five states erected from the Northwest Territory, school authorities were fully empowered to teach any study, however high, for which the pupil was prepared, and the Board had the money to pay, the opposition to high schools and high school work has died out, and last year the name of High School was restored by the Board. At no time has the standard of the work required, been in any manner or degree lessened, nor its extent lessened. The course of study, while it is regarded by no means fault-

less, has proved itself valuable by the success of our graduates both in higher institutions of learning and in the professional and business walks of life. It is the aim of all in charge not to weaken the schools but rather to strengthen them, and that more by the accurate and thorough prosecution of a few solid, necessary and valuable branches, than by the skimming of the whole field of art, literature and science.

At present the Board have under their charge sixteen school buildings, owned and one rented, well furnished with modern desks, globes, maps, approaches, reference books and a general library for the use of all the schools of some 6,200 volumes; one hundred and twenty-six teachers are employed in teaching the scholars from the lowest primary to the highest High school class. The school enumeration for the city, this last year, including about 1,000 transfers from the surrounding townships, is something over 14,000. Of these over 5,600 children were in the public schools, while over 4,000 were in attendance at the various parochial and private schools. Of the children over fifteen years of age, enumerated in the entire city, not over 300 attend any school whatever, but are almost universally at work of some kind or other. Excluding these and also those who, by reason of their youth and physical disability, are kept home by their parents, it would seem that not over 5 per cent. of the school population are out of school.

It has been the privilege of the present Superintendent, and, except for two years, that of Mr. O. P. Morgan, trustee, to have been officially connected with the graduation of every class that has left the schools. From 1865 to 1894, both inclusive, there have been graduated from the High School 363 young ladies and 124 young gentlemen, of whom seventeen took the

post graduate course, fifty-nine the full classical, including Greek, 208 the Latin and 203 the scientific course. In addition to these, 174 young ladies have been graduated from the training school.

It is a source of great gratification to those interested that these young ladies and gentlemen have proved themselves, with scarcely an exception, honorable and useful members of the communities in which they live, communities separated far and widely, better fitted by the education they have received for performance of their respective duties, and filled with a higher ambition to perform them in the best and most honorable manner. While, so far as is known, none of them have attained to positions of great distinction, they have adorned the more useful walks of middle life. No honorable profession, and scarcely any useful occupation, is unrepresented in their number. Many, to whom the "*res augustae domi*" had otherwise denied the opportunity of cultivating their natural abilities, have found in these schools ample facilities and most effective and kindly aids towards raising them to spheres of honorable usefulness, and positions that have enabled them to become valuable producers in the community, instead of wasteful drones and unproductive consumers of the results of other men's labor.

The prudent and business-like management of the funds and the affairs of the schools by a Board of exceptionally strong and successful business men, has enabled that Board, up to the present time, gradually to lessen the number of pupils under the charge of a single teacher. This gives to each scholar a greater personal attention on the part of the teacher; gives to the teacher a better opportunity for studying the individual character of each scholar and its modifica-

tions by heredity and environment, permitting the teacher more understandingly and more successfully to but in practice the best methods under the best conditions; avoids the evil effect to the health, physical, mental and moral, of an overcrowded room, and places the pupil in the best conditions to obtain the best results with the least expenditure of life and strength. The course of study has been so carefully arranged, that, while due and paramount importance attached to the so-called common branches, which must always form the necessary and only safe foundation for all advanced work, just and weighty consideration is given to those branches which serve not only to supplement the former but also to strengthen them to the better equipment of the scholar for the work of life. The natural relation of the study and the age and capacity of the child has been so studied and provided for, that as a rule at whatever age he may leave the school, he leaves it with the best to be attained in the time. The employment of special teachers in various studies, and of teachers in the advanced grades of the work especially educated and fitted for their respective fields, has enabled the Board to furnish the highest facilities for a very advanced education with less comparative cost than was formerly necessary to teach the three R's.

As an evidence of the value and accuracy of the work done in the schools, the Board can point to the facts, that no scholar from the advanced grades has ever gone to a highest institution of learning properly accredited and failed to take an honorable position for work and conduct, and that as large a percentage of our teachers, including those of the High School, have been educated and fitted for their profession in our own schools as in any other city in the country so far as they are advised. The facilities for prosecuting scientific study and

research are beyond those of many colleges ; historical and literary studies are prosecuted with a full, close and accurate consideration of original works, and with a breadth and comprehensiveness of scope, which a decade ago would have been considered impracticable. The results of the art teaching are seen in many of the homes of the city, and in many of its workshops. A course of study that raises the capabilities of a lad to those of a journeyman ; which reduces the expenditure of time in a given employment one-third, which enables a given result to be obtained with the use of a third less material, may be ornamental—highly so—but it is also unquestionably eminently practical. A method of study which raises the subject of reading, from a mere mechanical repetition of words, or their stilted mouthing after the manner of a barn-stormer, to an intelligent comprehension and rendering of the ideas of an author, and the ability critically to analyze and discuss the work of that author, may well be regarded as cheaply purchased by the salary of a special teacher. No less can be said for the delightful and harmonizing study of music, which enables the child, as well as the youth of more advanced years, accurately and with feeling to render in sweet and harmonious measures the elevating thoughts that seek their utterance in melody. All these facilities and more are freely furnished by a wise and prudently generous Board to the scholars of the Fort Wayne schools, almost without money and without price to them; furnished to a fullness and extent equaled in but few cities.

One other point, exhibiting the wisdom and foresight of the board, is worthy of special mention. Such strict cleanliness in all the schools, from garret to cellar, in outhouses and yards; such watchful care and attention to light, heat and

ventilation in all the rooms and halls; such observance of the laws of hygiene in study, rest, recreation, duration of recitation, and the hundred other points which bear upon the health, strength and comfort of the pupil have been and are so fully and closely carried out that during the last full school year, 1893-94, out of an enrollment of 5,610 the whole number of deaths in all the schools was sixteen, and that, notwithstanding the prevalence of serious and largely fatal epidemics, a mortality greatly below the average mortality of even the healthiest countries. It casts no slur upon the homes of the city to say that in many cases the schools largely counteract the evil effects that want of care, want of means and want of hygienic knowledge inflict upon their children in their own homes.

A very great part of these valuable results, and of the marked economy of means by which they have been brought about is due to the wisdom of the Council in keeping in their positions men eminently fitted by their natural abilities and their acquired experience, ably and successfully to administer the large, the important and the delicate interests which must ever belong to the education and building up of the future fathers and mothers of the land. Long may this wisdom in all its conservative power be exercised to the welfare, the growth, the prosperity and abounding good to the community of these public schools, so that a grateful posterity may rise up and call all concerned therein blessed.

ARCHITECT

PUBLIC SCHOOLS.

FORT WAYNE, Ind., April 1, 1897.

*To the Hon. H. P. Scherer, Mayor, and the Common Council
of the City of Fort Wayne:*

GENTLEMEN—We have the honor of submitting a statistical report of the public schools of Fort Wayne for the school year ending July 31st, 1896, and the organization of the Board and the supervision and instructions of the schools for the school year 1896-7,

ENUMERATION.

The enumeration of school population, which includes all unmarried persons between six and twenty-one years of age, was taken for the year 1896 under the new and stringent enumeration law of 1895. The enumeration dropped from 14,796 in 1895 to 12,632, a falling off of 2,164, or 14.6 per cent. The falling off, however, was general over the state, showing that the enumeration was generally excessive. The decrease in the whole state was 65,579. The decrease in cities was general, and Fort Wayne made a good showing as compared with many other cities.

The following table shows the decrease in certain cities of the state :

LaPorte—decrease, 37 per cent.

Terre Haute—decrease, 32 per cent.

Valparaiso—decrease, 31 per cent.

Crawfordsville—decrease, 24 per cent.

Columbus—decrease, 23 per cent.

Indianapolis—decrease, 21 per cent.

Connersville—decrease, 15 per cent.

Richmond—decrease, 11.7 per cent.

Evansville—decrease, 4 per cent.

The decrease in Fort Wayne was less than in many and about an average of the loss in the cities of the state.

The detailed report of the enumeration is as follows :

White—Males.....	5,967	
“ —Females	6,172
